Special Thanks to our Gold Sponsors Stats Group

12:00 pm - 6:00 pm

Early Registration Delta Grand Ballroom Foyer

2:00 pm - 4:00 pm

Exhibitor Set Up Only Delta Grand Ballroom Welcome to Winnipeg! Free evening for attendees to settle in and see the sites in Winnipeg or relax and get ready for a great event! For what to do and what to see visit: <u>https://www.tourismwinnipeg.com/</u>

Tuesday, April 10th, 2018

Special Thanks to our Gold Sponsors Stats Group

8:00 am - 5:00 pm

Registration Delta Grand Ballroom Foyer

8:00 am - 9:00 am

Breakfast with Exhibitors Delta Grand Ballroom Breakfast sponsored by:

9:00 am - 9:15 am Chair's Opening Remarks & CGA Welcome Assiniboia

9:15 am - 9:30 am Host Welcome Assiniboia

9:30 am - 10:15 am Safety Awards Assiniboia

10:15 am - 10:45 am

Refreshments with Exhibitors Delta Grand Ballroom Foyer

Refreshment Break sponsored by :

What's Current Session

10:45 am - 11:45 am

Plenary 1 – Forged In the Heart of Fire

Assiniboia

Spencer Beach, Motivation, Safety, Inspiration

How do you embrace change when it happens? Whether it is in a corporate restructure, new initiatives, a policy role out or change from unforeseen circumstances this presentation will ignite the audience in positively impact the outcome of change. Spencer opens his heart and relives his story to share with the audience how every fearful and painful moment was to become a blessing. By using his expert story-telling and amazing sense of humor Spencer will ignite the audience to believing in the power of help. He will share why change is positive as the audience discovers his greatest lesson was Forged in the Heart of Fire. This presentation will never leave you as Spencer's messages will be applicable throughout life. Assiniboia Moderator: Patricia Kittelberger, Sales Manager, Gas Measurement Instruments

12:15 pm - 1:30 pm

Lunch with Exhibitors Delta Grand Ballroom

Lunch sponsored by:

1:30 pm - 1:45 pm	Recap of Morning Session Assiniboia
1:45 pm - 2:30 pm	 Plenary 2 – Canadian Material Traceability Guidelines Assiniboia David McConkey, Manager of Operations and Safety, Canadian Gas Association Angela Scott, Manager Storage and Transmission Operations, Union Gas/Enbridge John R Anderson, Regional Manager, Emerson Automation Solutions As the Canadian federal code now includes traceability requirements, the Canadian Gas Association (CGA) initiated a task force to develop minimum guidelines to address code requirements. The task force was made up of both operators and suppliers to bring alignment on the requirements. The task force considered steel and plastic pipelines with components along with assemblies.
2:30 pm - 2:45 pm	Move to concurrents
2:45 pm - 3:30 pm	
	Engineering/Safety - Developing risk modelling tools to minimise hits to natural gas facilities Kildonan Room Jessica Ampleman, Engineer, Distribution Planning, ATCO
	Michael Woloski, Damage Prevention Coordinator, Gas Distribution ATCO Pipelines & Liquids Global Business Unit, ATCO
	Third party damage to underground facilities is unsafe, costly, a risk to system operations and preventable. According to the 2016 CGA DIRT report, 58% of hits to natural gas facilities in Alberta were due to insufficient locating and excavation practices. ATCO is developing risk modelling tools so that their Damage Prevention team can effectively contact companies and audit locates prior to the start of high risk digging activity to ensure accurate locates were made and proper exposure techniques are followed. This will allow the Damage Prevention team to focus on reducing third party damage potential at high risk excavations.
2:45 pm - 3:30 pm	Operations/Build and Construct - CNG Filling Station at Manitoba Hydro Charleswood A Room

	Tanis Brako, Department Manager of Gas Apparatus Maintenance and Control, Manitoba Hydro Manitoba Hydro has recently constructed a Compressed Natural Gas (CNG) filling station for emergency response to gas outages and planned maintenance work. The presentation will provide an overview of the incident that spurred the construction of the CNG station, challenges with implementation and projects where it has already been deployed.
2:45 pm - 3:30 pm	Integrity/Technology and Innovation - Challenges and Opportunities of Carbon Pricing for Natural Gas Distributors Charleswood B Room
	Trevor Mitchell, Senior Specialist Gas & Carbon Supply/Asset Optimization , Enbridge Gas Distribution Inc. Canada and Ontario have ambitious climate change goals. This is an introduction to the recently adopted cap-and- trade system in Ontario and how the carbon market is priced and traded.
2:45 pm - 3:30 pm	(Vendors and Exhibitors Session Only) Assiniboia
3:30 pm - 3:45 pm	Refreshments with Exhibitors Delta Grand Ballroom Foyer
	Refreshment Break sponsored by :
3:45 pm - 4:45 pm	Plenary 3 – Advancement in Managing Natural Gas Pipe Infrastructure Assiniboia Jim Johnston, Chief Innovation Officer, McElroy Manufacturing With Jim Johnston, from McElroy Manufacturing, we will present how industry is reacting to recent changes in standards (notably ASTM) and upcoming changes with CSA and PHMSA in the US. We will discuss how new product improvements to conventional heat fusion and electronic data capture of the fusion process with structured fusion training are changing how future projects will meet the demands of generations to come.

Wednesday, April 11th, 2018

4:45 pm

4:30 pm - 6:30 pm

Closing Remarks and Evaluations

Reception with Exhibitors

9:00 am - 9:15 am

Recap of Day One Assiniboia

9:15 am - 10:15 am	Plenary 4 – Delivering Natural Gas now and for years to come, a Canadian and worldwide perspective Assiniboia
	Tim Egan, President, Canadian Gas Association
10:15 am - 10:45 am	What's Current Part II
	Assiniboia
	Moderator: Patricia Kittelberger, Sales Manager, Gas Measurement Instruments
10:45 am - 11:15 am	Refreshments and Exhibition
	Delta Grand Ballroom

Refreshment Break sponsored by :

. 12.00

Engineering/Build and Construct - Management of infrastructure projects Kildonan Room
Victor Woo, Construction Project Manager, Gaz Métro
David Hudon, Construction Project Manager, Gaz Métro
The coordination of gas network works with urban roadworks has always been a great challenge. Over the past
years, Gaz Metro has developed a process through which they collect on a yearly basis the roadworks programs of
the municipalities. This presentation will explain how this information is treated to identify some interventions
required on the existing gas networks and to coordinate those works with the roadworks of the municipalities. This
presentation will also explain how this process allows some of the projects on the gas network to be performed in an "integrated" manner inside the municipalities work sites in sensitive and congested urban areas.
Operations/Safety and Engineering - Leak Detection 101: The History of Leak Detection, and the
Technologies that have Paved the Way for a Safer and More Efficient Natural Gas Industry Charleswood A Room
Bryan Chambers, International Sales Consultant, Heath Consultants Incorporated
The invention of flame ionization (FI) technology was a major revolution in gas leak detection methodology,
allowing gas companies to detect small leaks in the PPM from the surface as opposed to using subsurface methods.
More recently, optical and laser-based technologies have opened the door for to expanding the leak detection
toolkit by making mobile and aerial surveys more feasible and cost effective. While large methane leaks have
always created safety risks, the increasing focus on fugitive methane emissions has made it important to find all
sources of leaks, no matter how small. This presentation will provide a brief history of leak detection and discuss
the leak survey toolkit of the future.
Integrity/Technology and Innovation - Locating Failures in Buried Cathodic Protection Cables Charleswood B Room

Lyndon Browne, Supervisor, Corrosion, Transmission and Distribution, ATCO Cathodic protection of buried steel pipelines protects against external corrosion and is a critical component of Pipeline Integrity Management programs. Prolonged loss of cathodic protection systems puts a pipeline at increased risk of external corrosion. Therefore, failure of buried cathodic protection cables must be remedied as soon as possible. However, depending on the failure mechanism, cable faults can be difficult to locate with accuracy. ATCO has analyzed the difficulties encountered in locating faults on buried cathodic protection cables. The analysis found that adoption of relatively new technology can greatly enhance the success rate of locating cathodic protection cable faults, thereby reducing overall cable repair costs and restoring cathodic protection sooner.

12:00 pm - 1:30 pm

Lunch with Exhibitors

Delta Grand Ballroom

Lunch sponsored by:

1:30 pm - 2:15 pm

	Engineering/Safety - Technically Safe: How Technical Controls Create Safety for Industrial Control Systems
	David Blanco, SCADA Security Director, AutoSol Managers have assumptions about their safety procedures that go overlooked when creating cybersecurity policies.
	First, that the data used for decision-making is accurate. Second, that there is only one entity exerting control over the equipment on that network. If these assumptions are false, then a company's safety policy is undermined. This session will present the cybersecurity benefits of technical controls for industrial control systems over policy based ones as part of a safety program.
1:30 pm - 2:15 pm	Operations/Technology and Innovation - Aerial Meter Reading
	Charleswood A Room
	Chris Blunt, Manager, Measurement and Electronics, ATCO
	Implementation of aerial meter reading for a utility with over 1 million service points. Focus of the discussion will be on evaluation of aerial services versus current mobile collection methods, changes required and restrictions to those changes to efficiently implement the service.
1:30 pm - 2:15 pm	Integrity/Technology and Innovation - Improving cathodic protection test point data analysis through
	the use of visual tools
	Charleswood B Room
	Jonathan Landry-Bain, Engineer, Corrosion Control Program, Gaz Métro
	These improvements were realized by updating traditional spreadsheets. Moreover, test point data was integrated in a GIS using color coded visuals. Leak, metal loss and test point data were also integrated in the GIS to identify troubled areas.
2:15 pm - 2:30 pm	Move to concurrents (coffee service will be provided in foyer at 3:15 pm – please proceed directly to your

	concurrent session).
2:30 pm - 3:15 pm	
	Engineering/Build and Construct - PE Material Tracking and Traceability - ASTM F2897 Kildonan Room
	Mathew Desbiens, GIS Manager, AltaGas Utilities Inc.
	The creation of ASTM F2897 "Standard Specification for Tracking and Traceability Encoding Systems of Natural Gas Distribution Components (Pipe, Tubing, Fittings, Valves and Appurtenances)" has standardized the requirements for PE pipe/component manufacturers and natural gas utilities to collect and maintain important polyethylene asset records using barcodes. AltaGas Utilities has taken ASTM F2897 Tracking and Traceability to the next level by initiating a project to collect their new PE field assets with an integrated barcode scanner, GPS and GIS system. This session will involve a demo, utilizing barcode scanning and mobile Bluetooth technology integration, review the initiatives AUI has developed and will also review some of the challenges and successes encountered thus far.
2:30 pm - 3:15 pm	Operations/Technology and Innovation - Evolution in Dispatch
	Charleswood A Room
	Melissa Tzotzis, Work Management Dispatch Lead, Enbridge This presentation will focus on recent changes in Dispatch to help reduce overtime and demands on shift workers. We will also review changes implemented to better monitor response time and keep Dispatchers on the leading edge of technology. Over 60 thousand Emergency calls a year are managed by this group and every one of them is critical to the safety of our communities and employees. The primary responsibility of this department is to ensure crews arrive on site within the emergency threshold and complete the work safely.
2:30 pm - 3:15 pm	Integrity/Technology and Innovation – Challenges Faced for In-line Inspections
3:15 pm - 3:30 pm	Charleswood B Room Greg Knopinski, Project Manager Major Projects, Stations & Integrity, Enbridge The objective of the Integrity Management Program (IMP) at Enbridge Gas Distribution is to reduce the risk associated with high stress steel pipelines. The IMP was developed and implemented to meet the requirements of the Pipeline Integrity Management Program mandated by the TSSA and to satisfy the CSA Z662 Annex N. In-line inspections are performed for steel pipelines operating at stress levels at or over 30% SMYS on a 7-year interval to determine the condition of these pipelines which are a part of our distribution system. There are challenges faced with retrofitting the pipeline prior to in-line inspection, designing of launcher and receiver facilities within urban settings, operationally executing inline inspections on a distribution system, and executing Integrity Digs within the prescribed timeframes as part of the Pipeline Integrity Dig program. Refreshments with Exhibitors Delta Grand Ballroom Foyer
	Refreshment Break sponsored by :

3:30 pm - 4:15 pm	Plenary 5 - Technology and Innovation in the Utility Market Assiniboia Matthew Cable, Manager, Customer Technology and Innovation, Union Gas Focus on residential applications: An update on how various new technologies and partnerships are enabling Union
	Gas to help its residential customers become more efficient with their energy consumption.
4:15 pm - 5:00 pm	Plenary 6 – PVDF – The New High Pressure and High Temperature Plastic Gas Pipe Assiniboia
	Dr. Gene Palermo, President, Palermo Plastics Pipe Consulting
	PVDF, a fluoropolymer, is a solid-wall thermoplastic corrosion-resistant pressure pipe that can be operated up to 1050 psig in unregulated applications, and 665 psig in regulated gas distribution applications. PVDF can be made in pipe sizes up to 24" and is joined by standard butt fusion. Dr. Gene Palermo will discuss the PPI TR-4 listings at 23°C and 140°C, the status of the ASTM standard, key properties such as SCG and RCP, cost comparisons versus steel pipe, chemical resistance to liquid hydrocarbons, and inherent UV resistance.
5:00 pm - 6:00 pm	Reception with Exhibitors
	Delta Grand Ballroom
6:00 pm - 8:00 pm
