TO HIGHLIGHT
THE SERVICE DELIVERY ROLES
FOR ALL ORGANISATIONS
IN PROVIDING
COMPLEX SUPPORTS
UNDER THE NDIS

COMPLEX CASE MANAGEMENT & BEHAVIOUR SUPPORT CONFERENCE (CCBC)

The conference will have a primary focus on complex behaviour support and case management. It will aim to deliver a broad range of topics that are relevant for New England service providers.

The vision for the CCBC is to showcase the organisational and clinical governance necessary for delivering high quality services to meet the associated complex support needs that might be required by some people with a disability. As the New England area transitions to the National Disability Insurance Scheme from the 1st July 2016 the internal capacity for organisations to meet this area of support will be imperative.

BACKGROUND

CCBC is a Hunter New England, Family And Community Services initiative that was developed out of a scoping exercise which examined the availability of all types of disability services across the area. It identified a limited availability of local complex case management and behaviour support services. The availability of these distinct skills will be imperative to meet the current and future growing demand. In turn the CCBC's main goal is to facilitate access to the information and support required to further develop their own capacity.
