

Living Enhanced 

connected experiences

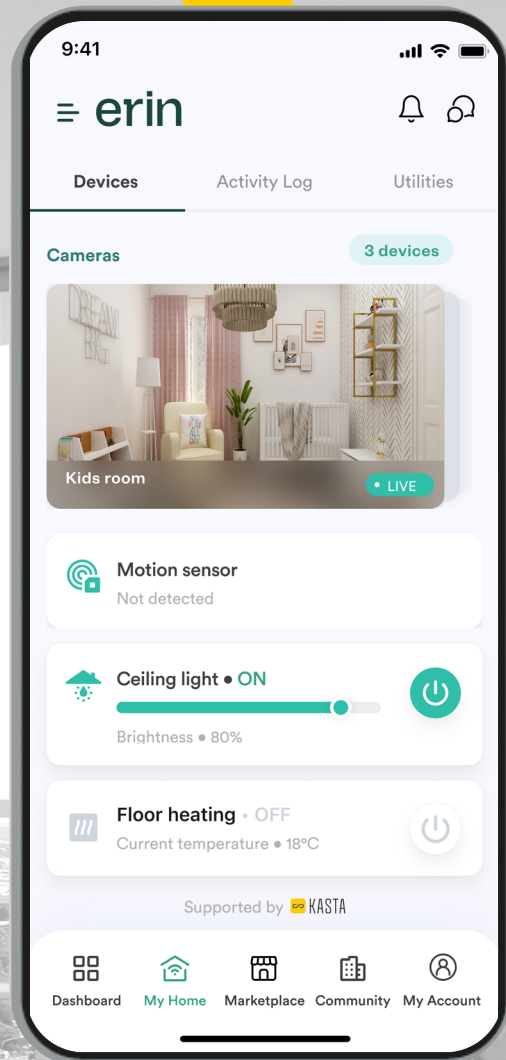

KASTA & Erin Living transform homes and buildings into vibrant, connected communities through one mobile app delivering amazing resident experiences.

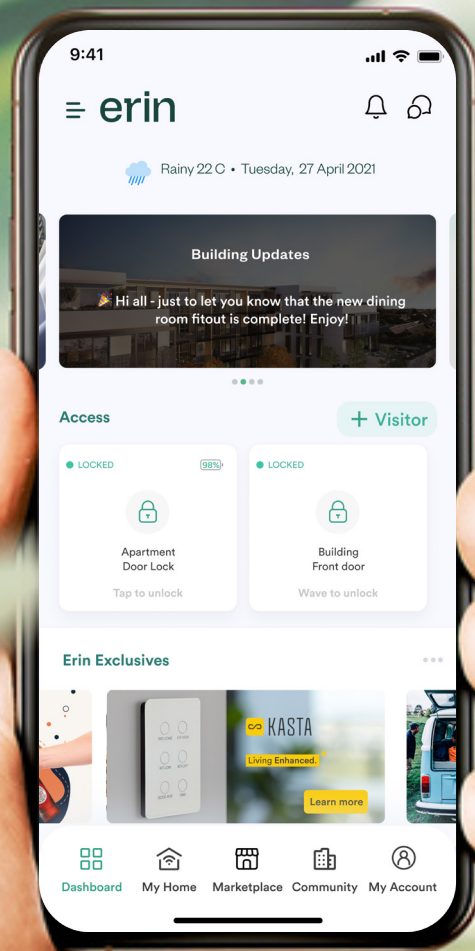

Developers, architects and contractors can utilise KASTA & Erin Living's combined technology to deliver an unparalleled resident experience that enables simple whole-home automation, convenient access through digital keys, an easy all-in-one spot to lodge defects, book amenities, access apartment-specific documents, communicate with building management, and other community services.

Two apps = too many!

By partnering together; KASTA and Erin Living have unlocked the key to smart living in a smart building. Using KASTA and Erin Living's integrated state-of-the-art technology, you can power your home through your app, and harness the Erin Living technology to fully unlock the full benefits of apartment living.

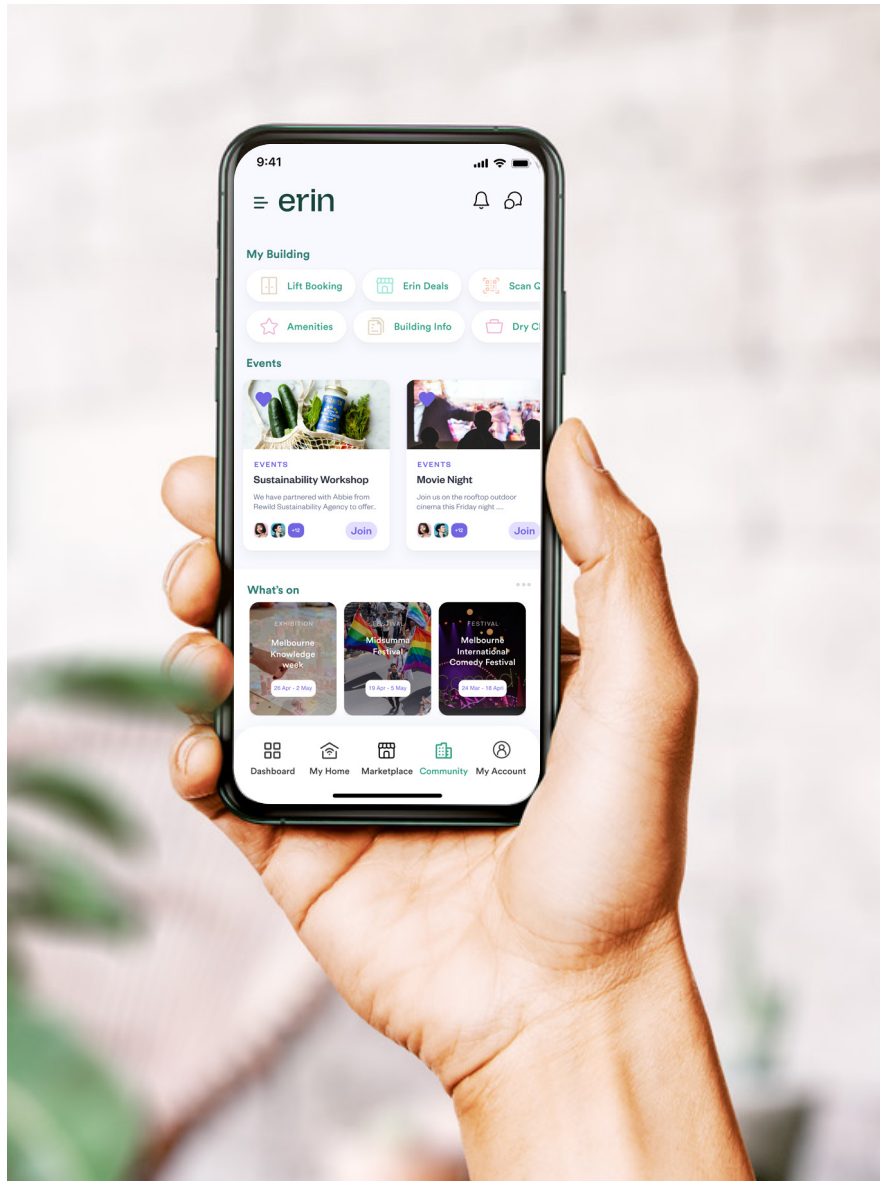

erin

Through KASTA's partnership with resident-experience experts Erin Living, our combined technology can connect residents to their home, their building and their community.

The purpose built mobile app for residents seamlessly integrates with KASTA to provide a complete smart building experience, and encourages residents to immerse themselves into an enhanced lifestyle and long-term occupancy commitment.

Buildings operate as self-sufficient ecosystems delivering benefits to property developers, building managers, owners' corporations and of course residents.

COMMUNITY LIVING

Connect residents to their home, their building and their community. Create vibrant, connected communities through shared notice boards and special interest groups.

SMART ACCESS

Mobile Access turns residents' phones into digital keys for access to the building, common areas and their apartment that can be instantly shared to visitors. Create safer environments by knowing exactly who has a key, when they've used it and stop any unauthorised copies from being made.

MARKETPLACE

Provide residents with thoughtfully curated and vetted services such as utility connections, home cleaning, removalists, personal trainers, pet services and dry-cleaning.

SUSTAINABILITY

Erin Living aims to create environmentally and financially sustainable buildings that promote wellness and human connection while reducing friction points in apartment living.

KASTA

Simpler and smarter control solutions designed for residential apartments. The complete range of KASTA smart products offer simple luxury for an enhanced lifestyle.

A tailored solution including lighting, power, exhaust fan, air conditioning power and curtain/ blind control, featuring the Hesperus™ Series of switch interfaces and powerpoints in combination with the ability to operate the system via the Erin Living app, including remote access and also via voice control through smart speakers. This solution includes control devices suited to enhance the lifestyle of typical apartment living.

CONTROL YOUR WAY

Living Enhanced starts at your fingertips - just one touch (or voice command) can take control of your apartment ecosystem.

WELLNESS THROUGH LIGHTING

A simple yet dynamic lighting control system throughout the apartments, helping to create the perfect mood for each room at the touch of a button. Includes technology that mimics circadian rhythms to assist in regenerative sleep and a completely balanced mind and body.

SAFE, ENERGY EFFICIENT POWER

Using smart, safe Hesperus™ series powerpoints enables easy set up and management of electronic devices featuring individual outlet control, with increased energy-efficiency and premium safety features like child-lock.

AUTOMATED LIFESTYLE

By connected air movement, window furnishing, door, gate and climate control devices, you can create a whole-home connected experience, featuring customisable smart automations such as scene control, device grouping, schedules and timers.

Reduce installation time and cost, and allow for future scalability needs.

Enjoy greater opportunity, pre-sale engagement and the advantageous ability to stay connected to all residents.

Be responsive to global trends and end user (homeowner) needs, i.e. meeting the demand and interest for smart home technology.

The look. It's your choice.

Choose from Hesperus™ Touch or Hesperus™ Push switch interfaces in a range of colours and labelling options.
