

OZKOR Pty Ltd is an ISO 9001 certified, leading Australian company in the supply of plastics materials handling equipment such as plastic pallets designed to suit specific industrial needs.

When it comes to meeting the high standards of hygiene and durability that the Australian food industry demands, Ozkor is a specialised centre for the provision of a wide range of materials handling products ranging from plastic pallets to collapsible bulk bins; tote bins and slip sheets focussing on industry compliance terms of reference.

Since the beginning, Ozkor has helped many companies achieve considerable cost savings by designing, manufacturing and, in some cases, rental options.

By closely working with Australia's largest food retailers, Ozkor has developed Australian standard size plastic pallets which work perfectly in automated warehouse systems as well as reusable retail display pallets for better presentations and greater distribution efficiencies.

Ozkor's design and development resource will provide a focus on the creation of new products to suit customer's specific applications. From the initial consultation we will, in close cooperation, carefully project manage the step-by-step development process aimed toward a satisfactory outcome within a budget and the high-quality standards expected.

Whether you wish to purchase new plastic pallets or prefer to rent, contact Ozkor to discuss how they can provide the answers you are looking for when it comes to meeting the operational standards required for your current and future projects.
