LET US ASSIST YOU TO IMPLEMENT A TECHNOLOGY ECO SYSTEM WITH FRESHFOCUS

At NCS Australia we understand that updating your IT systems is probably the last thing you have time for – regardless of the value that an ECO SYSTEM solution like FRESHFOCUS can bring to your overall business. It's why we use a clear, six-step process and can work with you as much or little as you require, from start to finish.

WHY FOOD PRODUCERS NEED A TECHNOLOGY ECO SYSTEM...

As an food supplier, you're operating in an extremely demanding and competitive sector, with huge pressure to deliver high quality produce, on time, against increasingly tight deadlines and at reduced prices.

In this environment, your use of technology can make the difference between success and failure. However, while many food growers are technically savvy in the paddock, many are let down by the technology they use to manage their business behind the scenes.

It's not uncommon for growers to be using a whole range of incompatible apps, tools and manual processes – many of which are slow, difficult to use, and lack overarching insight. Many growers are also too busy with the day-to-day running of their business to even think about taking on a large IT project – and for this reason, are reluctant to change the systems they already use.

This is where a purpose-built ERP-based fresh food solution such as **FRESHFOCUS**, implemented and managed by the experienced team at NCS Australia, can help. Built on the Microsoft Dynamics® platform, **FRESHFOCUS** has been specifically created for local growers.

Plus, the experienced team at Dialog IT can take care of all of the implementation and

What exactly is A TECHNOLOGY ECO SYSTEM?

a unifying platform to manage your business from
paddock to plate.

ERP stands for Enterprise Resource Planning

One of the biggest problems in many food supply businesses is their use of a whole raft of different (and often, incompatible) systems. When systems don't work together, insights can be missed, errors can be made, and everything doesn't run as efficiently as it should. An Enterprise Resource Planning (ERP) solution changes this, by bringing all of a business' existing applications into one, seamless solution. It also automates time-consuming processes such as scheduling, taking orders, keeping inventory, tracing tracking and recording financial data, and offers a centralised view of the business based on accurate, real-time data.

WHY DOES YOUR FOOD SUPPLY BUSINESS NEED A TECHNOLOGY ECO SYSTEM

SAVE TIME

Automates many processes, helping you work faster and more effectively and saving you time.

WORK SMARTER

Gives you detailed, real-time reports, KPIs and analysis on the performance of your business, so it's easier to spot trends or bottlenecks which can help you grow.

SEE CLEARLY

Integrates across your entire supply chain, allowing information to be shared with all of your key supply chain partners and stakeholders, meaning everyone gets the visibility they need.

LESS RISK

Reduces risk, as less likely to rely on manual processes – avoiding duplication and preventing errors.

WHY FRESHFOCUS?

FRESHFOCUS is a powerful new TECHNOLOGY based fresh food solution, specifically designed for the fresh food supply sector. It helps businesses that specialise in fresh produce, egg and food processing to move, track and trace products to market with speed, efficiency, transparency and profitability – in real time.

TECHNOLOGY YOU CAN TRUST

Built for Microsoft Dynamics® Business Central ERP solution, FRESHFOCUS integrates seamlessly with Microsoft Dynamics® through easy to use, add-on modules and other Microsoft-certified applications.

TRACEABILITY

FRESHFOCUS enables you to quickly and easily determine what's happening across your supply chain at any point in time, and presents the information via an easy-to-digest dashboard.

INSIGHT

FRESHFOCUS brings together your disconnected data and delivers real-time results that can help you rectify problems before they escalate, determine areas of inefficiency, and make much smarter and more informed decisions.

AUTOMATE

FRESHFOCUS can help you automate processes that you previously did manually, reducing errors and saving you considerable time and money.

ANYWHERE, ANYTIME

As FRESHFOCUS is based in the cloud, you can access it anywhere, and on any internet-enabled device.

WHY

NCS Australia?

NCS Australia is Australia's leading services business and is a specialist in Australia's fresh food supply sector. A Microsoft Gold Partner, we help Australian growers use technology to streamline their processes, automate their manual systems, get the business intelligence they need, and ensure compliance with traceability standards.
