RESPECTING
AND WINNING
TOGETHER

PROMOTING
SUSTAINABLE
FUTURE

OUR PROCESS

We begin with selecting the fresh crop through proper physicochemical evaluation by our trained field staff according to National and International standards. The selected crop is transported from the field to the factory, where it undergoes sorting, grading, first washing, second washing, slicing, blanching, and then long-term drying in multiple stages at low temperatures to preserve its natural taste, texture, and color.

ONION

AVAILABLE IN

Powder

Flakes

TYPICAL APPLICATION

Used in Sprinkle it into soups and stews, create creamy dips and salad dressings, perk up casseroles and vegetables, or use it as a base for rubs and marinades. Commonly used Spice blends, Rice blends, Soups, Salad dressings, Sauces, Gravies, Condiments, Canned foods, Frozen foods, Snack foods, Meats & processed foods and Soup

Whole, Flakes, 40, 80, 200 Mesh size powder

Pack Sizes Available:

1 kg, 5kg, 20kg, As per demand

SUGAR BEET

BENEFITS:

Sugar beet, (*Beta vulgaris*), one of the four cultivated forms of the plant *Beta vulgaris* of the Amaranth family (*Amaranthaceae*), cultivated as a source of food.

The water absorption capacity of WBF® is three times its own weight. Furthermore, it contains a high percentage of natural sugars. As a result, it is the perfect premix for the baking industry.

White Beet Flour (WBF®) contains no phytic acid. Cereal products, such as bran and flour, contain phytic acid which forms strong chemical complexes with iron and zinc hence reduce the natural absorption of these essential minerals in the human body.

White Beet Flour (WBF®) is by nature free from gluten, which means it is an excellent dietary fiber source for people suffering from gluten intolerance.

TYPICAL APPLICATION

In the baking industry, WBF® is used as a premix for biscuits, pizzas, bread, buns, cakes, muffins, rusks, and many other products. Sugar beet flour also has a high fiber content, which makes it ideal for making functional products.
