Capabilities Statement

NOATECH

About Us

NOATech delivers innovative and robust wireless connectivity and renewable energy solutions. Our vision is to create better ways to live; merging new technologies with ancient wisdom. The eye in our logo is based on the wedge-tail eagle, a powerful symbol of Indigenous Culture, a guardian in the sky watching over the land and waters.

Offering a diverse range of tailored communication solutions across multiple industries, NOATech is committed in providing and supporting high performance wireless products including: IoT/M2M solutions, Push-to-Talk (POC) devices, Remote Site Monitoring, Indoor GPS & Radio solutions, Private LTE Small Cell solutions, and Digital Two-Way Radio systems. Together with industry-leading technology partners, NOATech aims to deliver world-class outcomes for mining, oil and gas, local government, emergency services, public safety, hospitality and retail, construction and manufacturing.

For us the customer comes first - and its our strong belief is that strong customer-vendor relationships and trust are vital for success. Our full service approach on total wireless technology and power solutions offers customers the ease and convenience of a single point of contact while providing a comprehensive range of services and solutions, whether it is to manage existing projects or developing Turnkey Systems. End-to end responsibility has enhanced its reputation of reliability and responsibility for the services provided.

Our Sectors

- **Mining** - Rugged and reliable radio communications are essential for every mine site providing data as well as critical communications.
- **Oil and Gas** - Certified intrinsically safe communications equipment designed for use in hazardous environments.
- **Local Government** - Flexible solutions that meet the everyday demands of local government users and services.
- **Renewable Energy Solutions** - With ever increasing distance from the base increases, solutions that provide end-to-end services at off-grid locations is necessary.
- **Emergency Services & Public Safety** - Mission critical solutions that can provide wide area coverage and clear, low noise voice and data transmission.
- **Hospitality & Retail** - Cost effective site-wide communications regardless of the size of the area and tailored to meet the client's budget.
- **Construction** - Secure multi-channel radio networks to ensure simple and clear communication between all users without interference.
- **Manufacturing** - Effective communications systems in high noise environment and ruggedized solutions to ensure maximum productivity.
- **Maritime** - Whether you require voice or data, our maritime range has a solution that keeps you connected to other vessels, or back to land.

Our Solutions

- **Digital Two way Radio Systems** - Digital radio standard systems that provide critical communications while allowing group calls, dynamic groups, messaging and direct mode communications.
- **Private LTE Small Cell Solutions** - LTE infrastructure solutions securing high-speed mobile communication while drastically minimizing total costs of ownership.
- **In-Building Radio & GPS coverage solutions** - Tailored solutions using digital repeaters offer you uninterrupted service inside buildings, tunnels, shopping centres and in vehicles.
- **Push-To-Talk Over Cellular** – Cellular or 4G based PTT has several intrinsic qualities that lend well to specific business circumstances that need constant communication over vast geographies, or field-maintenance.
- **Solar Solutions** – Solutions that can produce maximum energy with minimal wind load; on which the photovoltaic modules are not hindered by dust or dirt and therefore always able to deliver full power.
- **RF over Fiber** - BHE is a company which develop and manufacture high performance, competitively priced RF and Microwave systems and solutions.
- **Body Worn Solutions** - Body cameras to protect staff and assets, review incidents and gather evidence. Proven to deter aggression and protect front-line workers.
- **Wireless Networking** - Wireless IP links offer a wireless digital link solution for back haul, point-to-point, point to multi point, mesh, mission critical highly efficient links and telemetry links for SCADA applications.
