

- Communities don't have local data on drinking (or drug use)
 - To fight for better services and programs
 - To see how work to tackle drinking is going
- The best data on Aboriginal drinking patterns is 20 years old -- and urban only

(Commonwealth Health, NDSHS, 1996;
Chrikritzhs and Brady 2006)

- Develop an iPad app that makes it easy for people to report what they drink
 - NHMRC, 5-year funding
- Even if they:
 - Speak English as a 3rd or 4th language
 - Don't like reading
 - Are ashamed about their drinking
 - Are worried about child protection services

We know that..

- Drinkers often
 - share alcohol
 - use atypical containers (e.g. empty juice bottles)
- Drinking may vary with:
 - Travel
 - who the drinker is with
 - what is going on (e.g. celebration or funeral)
- Some remote communities don't have 'mainstream' counting systems
- Drinkers rarely count drinks

In partnership (e.g. ADAC, communities, services)

- Develop an app
 - Workshop: community and service reps; experts
 - Consider recognised assessment approaches
- Test the app
 - Does it work as well as a person asking?
 - Does it give the same sort of answers if used again?
- Improve the app
- Test in other communities in a survey
- Refine the app

- Assessment of drinking must consider cultural context
- Electronic aids may reduce barriers like shame and assist memory and recording
- Potential value in surveys, clinics and health promotion
- Broader potential, e.g. non-English speaking or marginalised groups worldwide
