

Implementation & Advisory Services

Whether implementing new policies, procedures, or programs or building on existing initiatives, achieving the desired end state in a cost-effective manner requires extensive experience and expertise. Our implementation and advisory experience includes work in all modes of transportation in diverse environments, both in developed and developing parts of the world.

- **Customs Modernization**
- **Technology acquisition & deployment**
- **Program design & development**
- **Consulting on tactical operations**
- **Risk management capability development**
- **Training programs for officers, analysts, & managers**
- **Long-term embedded assistance**

Assessments

Leveraging our proprietary assessment methodology and global best practices, CT Strategies assists government agencies and private companies to develop efficient and secure solutions by providing critical insight into their operating environments.

- **Evaluations of operations in all modes of trade and travel**
- **Analyses of related policies, procedures and regulatory documents**
- **Cross-disciplinary teams of subject matter experts in areas including:**
 - **Border technology deployment**
 - **Trade and travel data analytics**
 - **Trade policies and regulations**
 - **Public-private partnerships**
 - **Supply chain security**
- **Gap analyses**
- **Comprehensive sets of recommendations**
- **Implementation and training plans**

Capacity Building & Program Development

While often viewed as standalone solutions, infrastructure and technology investments alone do not minimize cargo and passenger wait times at the border. Authorities need to optimize their resources by investing in programs, processes, and right-sized technology that will increase their capacity to efficiently enable cross border trade and travel.

- **Authorized Economic Operator (AEO)**
- **Public-private partnership**
- **Customs officer and intelligence analyst training**
- **Trade and travel processing and security software**
- **Risk management**
- **Operational assessments**
- **Integrated imaging systems**
- **Scalable technology deployments**

BORDER MANAGEMENT SIMPLIFIED

Border management agencies are continually asked to respond to evolving trade and travel dynamics. The right technology deployed in the right environment is essential for efficient, 21st century border management. Responsible investment in the most effective and applicable technologies requires comprehensive understanding of the operating environment of the procuring agency, best practices employed around the world, and current and emerging border management technologies.

CT Strategies assists border management agencies in identifying, implementing, and managing technologies that maximize security and efficiency while optimizing return on investment. Effective border management and efficient trade facilitation do not have 'one size fits all' solutions. We pride ourselves on delivering customized solutions tailored to the local operational and budgetary environment that can be cost-effectively scaled as conditions evolve.

OUR SERVICES INCLUDE

- **Operational Assessments**
- **Concept of Operations Development**
- **Technical Requirements Development**
- **Acquisition & Contract Support**
