# WHY HAVE A <u>SYSTEM</u> FOR SAFETY MANAGEMENT?

#### WHY A SAFETY MANAGEMENT SYSTEM (SMS)?

- I have no idea, SMS is just the "flavor of the day"
- To keep the regulator happy
- A regulation may be coming, let's get ahead of it
- To protect our organization from unacceptable risk

#### An *effective* SMS requires:

- 1. A focus on **Organizational Issues**
- 2. A Positive Safety Culture

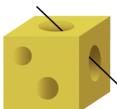

### THE ORGANIZATIONAL ACCIDENT

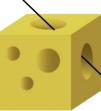

#### ORGANIZATIONAL FAILURE MODEL

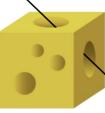

PROFESSOR JAMES REASON, UNIVERSITY OF MANCHESTER

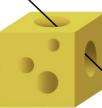

Decision makers-Fallible Decisions

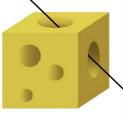

Line Management–Deficiencies

Preconditions and/or Psychological Precursors of Unsafe Acts

Line Activities—Unsafe Acts

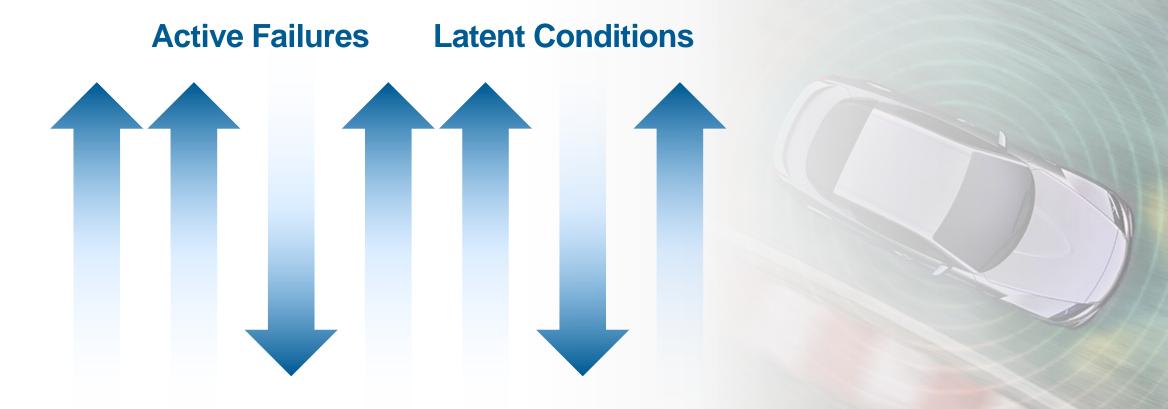

Defenses-Inadequate

#### THE ORGANIZATIONAL ACCIDENT...

...has two components:

#### THE ORGANIZATIONAL ACCIDENT...

...is an accident that has, as its root causes:

- Corporate safety culture
- Corporate decision making

## **POSITIVE SAFETY CULTURE**

#### SAFETY SYSTEMS, CLIMATE AND CULTURE

#### **SAFETY SYSTEMS:**

- How safety is managed
- An engineering approach

#### **SAFETY CLIMATE:**

- How people feel about safety and its management
- An explicit measurement of attitudes

#### **SAFETY CULTURE:**

- What people believe and accept as normal working practice
- An implicit expression of commonality

#### CHARACTERISTICS OF ORGANIZATIONAL CULTURES

	<b>Pathological</b>	Bureaucratic	Generative
Information	Hidden	Ignored	Sought
Messengers	Shouted	Tolerated	Trained
Responsibilities	Shirked	Boxed	Shared
Reports	Discouraged	Allowed	Rewarded
Failures	Covered up	Merciful	Scrutinized
New ideas	Crushed	Problematic	Welcomed
Outcome	Conflicted organization	"Red tape" organization	Reliable organization

Source: Ron Westrum

#### **ASPECTS OF POSITIVE SAFETY CULTURES**

#### Informed:

People are knowledgeable about the human, technical, organizational and environmental factors that determine the safety of the system as a whole.

#### Reporting:

People are prepared to report their errors and experiences.

Positive Safety Culture

#### Just:

People are encouraged (even rewarded) for providing essential safety-related information. However, there is a clear line that differentiates between acceptable and unacceptable behaviour.

Reference: Managing the Risks of Organizational Accidents, James Reason, Ashgate, 1997

#### Flexible:

People can adapt organizational processes when facing high temporary operations or certain kinds of danger, shifting from the conventional hierarchical mode to a flatter mode.

#### Learning:

People have the willingness and the competence to draw conclusions from safety information systems and the will to implement major reforms.

#### INDICATORS FOR SAFETY CULTURE MATURITY

Chronic unease, safety seen as a **profit center**, new ideas are welcomed.

Resources are available to fix things before an accident. Understanding that there is a wide range of factors. Still obsessed with statistics.

"We cracked it!"
Lots and lots of **audits** to chase statistics.

"We are serious, but why don't they do what they're told?" Endless discussions to reclassify accidents. Safety is high on the agenda after an accident.

"Of course we have accidents, it's a dangerous business. Sack the idiot who had the accident."

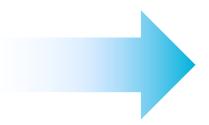

Source: Patrick Hudson

# INTRODUCING A SAFETY MANAGEMENT FRAMEWORK

#### THE SAFETY MANAGEMENT SYSTEM

- SMS methods treat safety as a core business function
- Proactive
- Tailored to each company

The way of our future!

- Provides a systematic way to
  - 1. Control risk
  - 2. Provide assurance that risk controls are effective

#### THE FOUR PILLARS OF A SAFETY TABLE

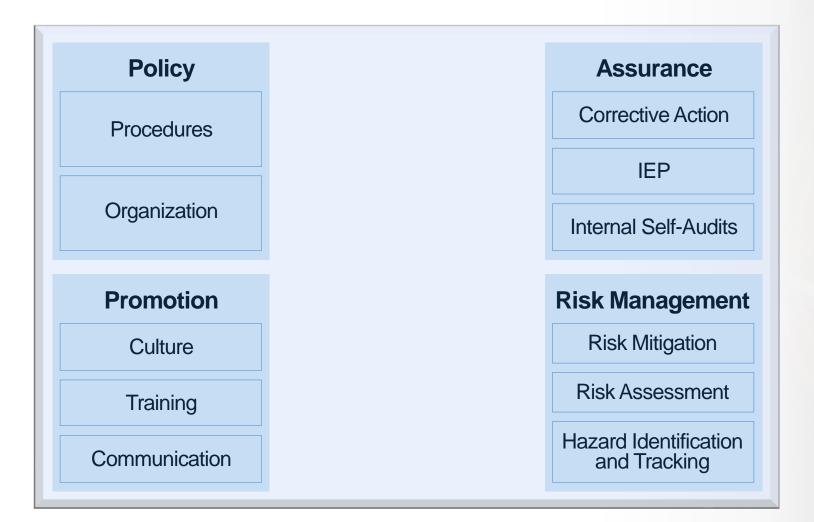

Overview

**Policy Assurance** Risk Management **Promotion**

#### INFORMATION FOR DECISION MAKING

## Safety assurance information comes from a variety of data sources, including:

- Continuous process monitoring of day-to-day activities and operations (including in-service)
- Investigations of safety-related events
- Formal auditing and evaluation programs
- Inputs from employees, contractors and customers through voluntary reporting systems
- Inputs from the regulator
- Monitoring of external changes that affect the operation
