Dental Hygienists as Gatekeepers for Implants

Deborah Miller, RDH, MS, MA

Does the reason for tooth loss effect us as hygienists?

Implants as options for tooth replacements:

Single tooth

Multiple teeth (implant bridge)

Implant supported partials

All on 4

Over denture

Hybrid Fixed Bridge

Patient Selection

Diabetes

Smoking

Bisphosphonates

Poor Oral Hygiene

Age

Restorative Requirements

Quality and Quantity of Bone

Goals of Implants are to replace teeth, stabilize occlusion, preserve bone, maintain esthetics and restore mastication.

How are implants and teeth alike?

How are teeth and implants different?

Causes of Mucositis and Peri-Implantitis

Criteria for Mucositis

Criteria for Peri-Implantitis

Treatment for Mucositis

Treatment for Peri-Implantitis

Periodontal Examination for teeth verses implants.

Probing Implants

Implant Instruments

Home Care products

Implant Maintenance Protocol

use light touch with plastic probe

record probe depth, BOP, suppuration

baseline and yearly peri-apical radiograph

use plastic or carbon scaler to remove plaque

use plastic tip ultrasonic scaler or metal explorer (possibly scaler) to remove calculus

alter home care aids or techniques if plaque or bleeding present then re-eval in one month

refer to surgeon if pain, suppuration, increase in pocket depth or bone loss

3-4-6 month recall interval
