

## **UESI updates on the ASCE 38 and SUE for municipalities recent release**

UESI of ASCE is now in the process of updating and the ASCE 38. This document is a key part of the Transportation Association of Canada Utility Coordination and Utility Relocation guidelines that shaped the use of utility information since its release in 2002. In 2020, the rereleased long awaited update being published. This update has provided many needed clarifications and focus on the newer technologies and our current realities with bigger larger projects and the awareness of utility impacts. Along with this new document, UESI has as well come up with a document SUE for municipalities and right of way owners. This recently released document will guide the Municipalities and ROW owners in how to use and how to procure SUE with in their projects. The new document would complement the existing TAC UCUR guidelines and ASCE 38.
