

# Tactics & Metrics for Scaling an Open Source Company

Rob Bearden  
Executive-in-Residence  
Benchmark Capital

## Benchmark Capital & Open Source

The value of an open source company has a direct correlation to the size of the community and its ability to influence and monetize it.

## Discussion Topics

- ▲ Foundation for a successful open source company
- ▲ Tactics for creating value
- ▲ Key metrics for monitoring and scaling

## Foundation for a Successful OS Company

- ▲ Open Source is a development and distribution model
- ▲ There are three primary components:
  - Technology
  - Community
  - Business Model
- ▲ Get the first two right or lose

## Technology Requirements

- ⑩ Core product should have 70-80% functional parity
- ⑩ Core must continually expand, innovate & remain open source
- ⑩ Should be easy to access, setup and use
- ⑩ Clear and concise messaging, footprint & roadmap
- ⑩ Small, lightweight, easy-to-consume modules
- ⑩ Clear definition between open source & "enterprise"

## Community Requirements

The size and health of an OS community is directly proportional to:

- ▲ Innovation in which the product is built & deployed
- ▲ Complexity of the problem it solves
- ▲ Size of the market it disrupts

## Community Requirements

- ▲ Strong thought leader who is continually expanding, recruiting and pushing forward
- ▲ Value & respect the input of the community
- ▲ Responsive to the community
- ▲ Rely on community for functional prioritization, QA, innovation, adoption, market acceptance & velocity of distribution

## Business Model

Misalignment between a business model & the communities tolerance points will never be accepted.

This will manifest itself in having multiple distributors of the technology.

**Compiere**

## Successful Business Models:

- ▲ Owner/builder vs. packager/distributor
- ▲ Commoditization vs. innovation
- ▲ De facto distributor of the technology
- ▲ Create & deliver value that the community understands, needs and pays for
- ▲ Productized for rapid consumption by both direction and indirect channels
- ▲ Strategy for viral awareness, adoption, distribution and consumption

## Tactics for Creating Value

To establish scalable valuation, you must demonstrate the ability to expand beyond community adoption & establish a high velocity customer engagement process that results in monetization

## Tactics for Creating Value

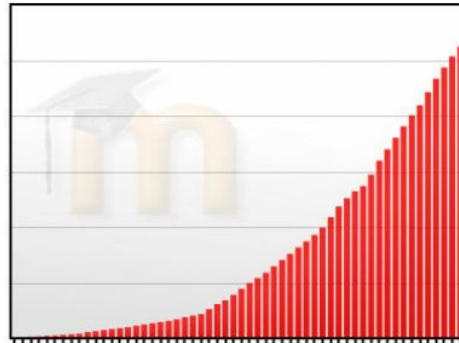

Successful “Closed Loop Demand” systems have the following traits:

- ▲ Effective company positioning & messaging
- ▲ Productized offering
  - Product roadmap, subscription offering, training and services offerings
- ▲ Focus on two best salespeople
- ▲ Awareness activities that rise about the noise
  - PR, AR, influencers, customers, partners, social media channels
- ▲ Efficient outbound marketing campaigns
  - Balance customer acquisition costs vs. lifetime value of customer
- ▲ Inbound web traffic management
  - Manage fine line between community and .com sites
  - Effective and fair lead capture
  - Nurturing campaigns to expedite adoption

## Key Metrics

What are the key metrics for monitoring and scaling an open source company?

Traffic, traffic, traffic!

## Measuring Community Growth

Metrics include:

- ▲ Unique community website visitors
- ▲ Downloads
- ▲ Forum posts
- ▲ Wiki contributions
- ▲ # of committers
- ▲ Code contributions by committers
- ▲ Social media posts (blogs, Tweets, etc...)

## Measuring Business Health

- ▲ Monitor the customer acquisition process from beginning to end
- ▲ Monitor the ratios between stages to identify bottlenecks

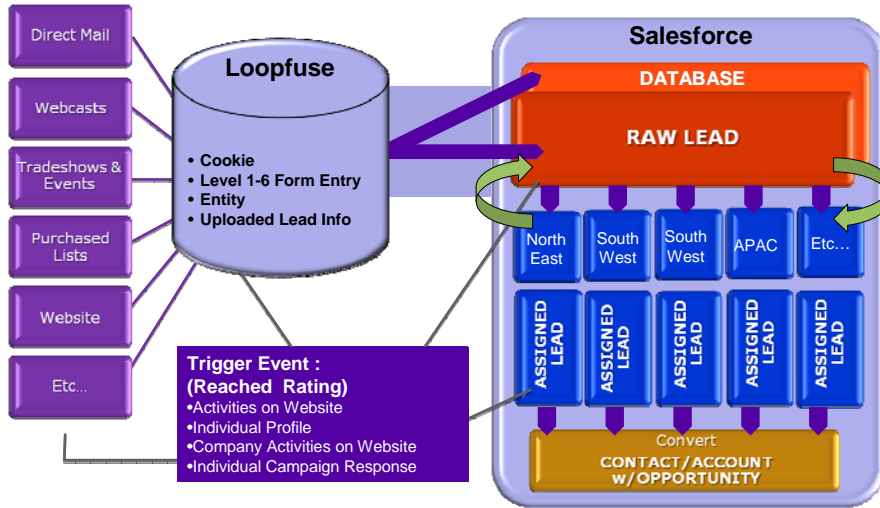

# Lead Funnel

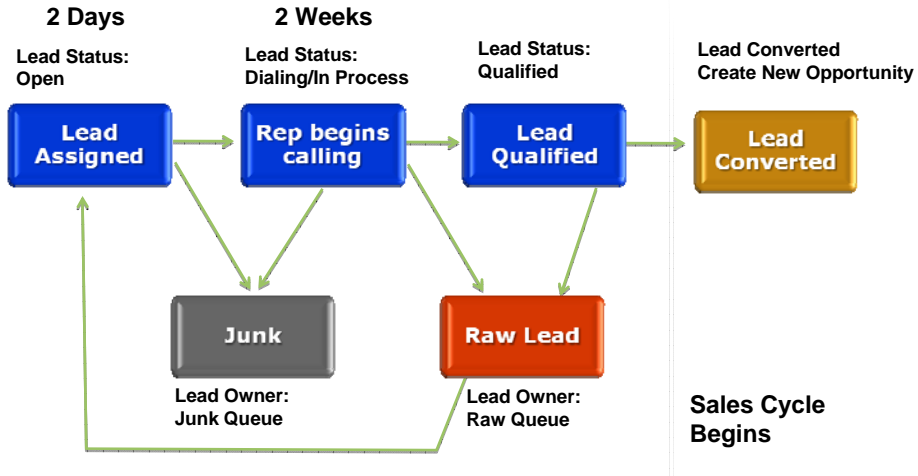

## The Handoff

## What Happens to Assigned Leads
