

Evaluation of the Styrian Personal eXray-Record

Ph. Neurohr and P. Seifner

Evaluation Framework

- Technology Acceptance Model (TAM)
- Patient Activation Measure (PAM)
- Education and pre-existing knowledge

Evaluating Patient Empowerment

- ✓ 1 Self-responsibility
- 2 Knowledge
- ? 3 Behaviour change
- 4 Keep objectives under stress

Results

The typical user is IT-savvy (C), of higher education (A) and has probably worked for at least one month in the health care sector (B).

However, cumulative (E) or individual (F) medical exposure was not available to the typical user previously.

The typical user feels responsible for his or her own health (D), and is empowered by now being able to track individual and cumulative exposure (G) due to the services provided by the eXray-Record.
