Introduction

PUBLIC HEALTH FOUNDATION OF INDIA

HIV/AIDS presents a major public health challenge, leading to increased demand for enhanced educational and research skills. Effective public health responses in prevention and management of HIV/STIs require strong human resources, focused on the development and implementation of evidencebased policies, together with lifelong learning and the generation of new knowledge.

The University of Sydney has been delivering a Masters program in HIV, STIs & Sexual Health for over twenty years, and is able to draw on an extensive

Results

network of content experts, together with specifically designed online resources. We wished to explore how best to leverage Australian pedagogic and research skills in HIV/STIs into an Indian setting, in order to build human resource capacity.

The aim of the partnership was to develop an educational program at the Public Health Foundation of India (PHFI) with which to build local capacity to strengthen human resources in the field of HIV and STIs, and to extend and strengthen India's response.

Methods

As part of the international development of the University of Sydney's Masters Program, training partnerships were formed with overseas institutions having cross-disciplinary and professional representation from both service and NGO sectors. PHFI was chosen as an institutional partner in India on the basis of its academic track record, extensive network of institutions and the broad background of Faculty members. Financial support was obtained from the Australian Government's aid agency.

The project started with scoping visits and training of core members of the academic team through Global Intensive Professional Program in HIV/STIs (GIPPH). A Collaborative Partnership model (Figure 1) was developed, with three key phases:

of and access to health services Improved quality of relevant Research

research capacity: in STIs and HIV

Figure 1 . Collaborative Partnership Model of Capacity Building in HIV and STIs

A mapping of an HIV educational course in India was done and the manuscript published. NACO's human resource capacity building initiatives were also mapped, to inform the development of a new course, and published as a manuscript.

A draft modular curriculum (Table 1) was developed by a core team of academics from University of Sydney and PHFI and discussed at the second in-country workshop. Each module was assigned a primary author and a designated reviewer. An independent expert reviewed the outline of the program, to ensure constructive alignment.

To minimise costs, an e-learning site was developed using open source software and containing jointly developed content. (Figure 2)

A jointly developed pilot course was delivered at the Indian Institute of Public Health, Delhi, PHFI, from Jan to June 2014. This involved a blended learning approach, combining online and an intensive contact phase, conducted jointly by PHFI and University of Sydney staff. Based on feedback from participants and other stakeholders, and also to explore the feasibility of a completely online program, the second delivery in 2014 was conducted in an exclusively online format, with delivery of virtual sessions. A total of 53 students successfully completed the course in 2014 and a further 29 students are undertaking the course in 2015. (Table 2)

Phase 1: Stakeholder engagement

- formation of an Activity Advisory Committee;
- stakeholder survey and national stakeholder workshops, to establish local needs pedagogic skills development
- Phase 2: Clarifying local need

THE UNIVERSITY OF

SYDNEY

- curriculum mapping and development to reflect local educational priorities
 Phase 3: Operationalising
- pilot delivery, followed by regional expansion.

Results

The University of Sydney partnered with the PHFI, due to their focus on public health education, coupled with their technical and pedagogic expertise. 27 local faculty members of PHFI and affiliated organisations were trained in Australia and an enabling environment created by reciprocal visits and close collaboration.

A "Partnerships in public health education workshop" was held, along with a meeting of the Activity Advisory Committee at the University of Sydney, to understand key aspects of the proposed course. This was followed by national consultation in India, with participation from academic institutions, the Indian National AIDS Control Organisation (NACO), NGOs, representatives from key populations and prospective participants.

CERTIFICATE COURSE IN SEXUALLY TRANSMISSIBLE INFECTIONS AND HUMAN IMMUNODEFICIENCY VIRUS/ ACQUIRED IMMUNE DEFICIENCY SYNDROME (STI & HIV/AIDS) INTENSIVE PROFESSIONAL PROGRAM THROUGH DISTANCE LEARNING (Course Development and Coordination supported by AusAID grant to the University of Sydney and Public Health Foundation of India) Danuary 2014 - June 2014 Yenue: Indian Institute of Public Health (IIPH), Delhi

Certificate Course in STI & HIV/AIDS	
Course Development and Coordination supported by AusAID grant to the University of sydney and Public Health Foundation of India Drogoing Batch: July- December, 2015 Admission open for January, 2016 batch Last Date of Submission of Online Application: 15th November, 2015. Background HIV/AIDS poses a huge challenge to the developmental gains achieved in the past few decades. Sexually Transmissible Infections (STIs) and HIV are closely Interlinked and therefore, there is a need to develop comprehensive response that deals with all the aspects of STIs and HIV. This calls for the need of skilled human resources working to prevent, control and treat STIs and HIV. This calls mumber of skilled professionals needed are large while matching training programs to strengthon

Funding: Program was funded by grants from the Australian Aid program of

the Department of Foreign Affairs and Trade (formerly AusAID). Program partners, University of Sydney and PHFI contributed financially and in kind.

- Clarity of purpose, careful matching of institutions and effective communication were keys to building informed partnerships.
- The leveraging of existing expertise, local adaptation, together with the use of open-source software has led to the development and running of a cost effective, scalable capacity-building resource.
