Touch-sensitive screens

A transparent touch screen laminated with protective glass. It can be used with a number of displaying apparatus such as ATMs, KIOSKs, POS terminals and monitors. As presented, the subject article does not have any clear reference of a specific use.

A touch screen, laminated with tempered cover glass. It is cut in the shape of the front face of a specific mobile phone with two holes, one for the main button and the other for a speaker. It is also equipped with a flexible printed circuit board (FPCB) with a mounted touch integrated circuit (IC). It is used for a specific mobile phone. It has no function of displaying.

(unmanned aerial vehicles (UAVs))

Remote-controlled four-rotor helicopter, also called "quadcopter", with an **integrated digital camera**, 5.8 GHz **remote controller**, 2.4 GHz **Wi-Fi range extender** and **"smartphone" mount**. The helicopter is controlled via levers on the supplied remote control. The remote control comes equipped with a mount for a "smartphone" so the operator can use the phone screen to view "streaming" video images via Wi-Fi signal. The operator can take both videos (1080p HD) and still images (14 MP). The operator uses a separate program ("app") from the manufacturer to control the camera via the smartphone. The range of the supplied Wi-Fi range extender is approximately 300 meters and flying time is approximately 25 minutes before the battery must be recharged.
