A Moody's Analytics Company

**Welcome to the
business of certainty**

WCO Presentation – November 2017

Data Analytics at the Border - Using Global Company Data to Minimise Fraud, Detect Risks Associated with Sanctions and Ensure Global Trade Security

Qing Liu

Head of Government Solutions, Asia Pacific
Bureau van Dijk, a Moody's Analytics company

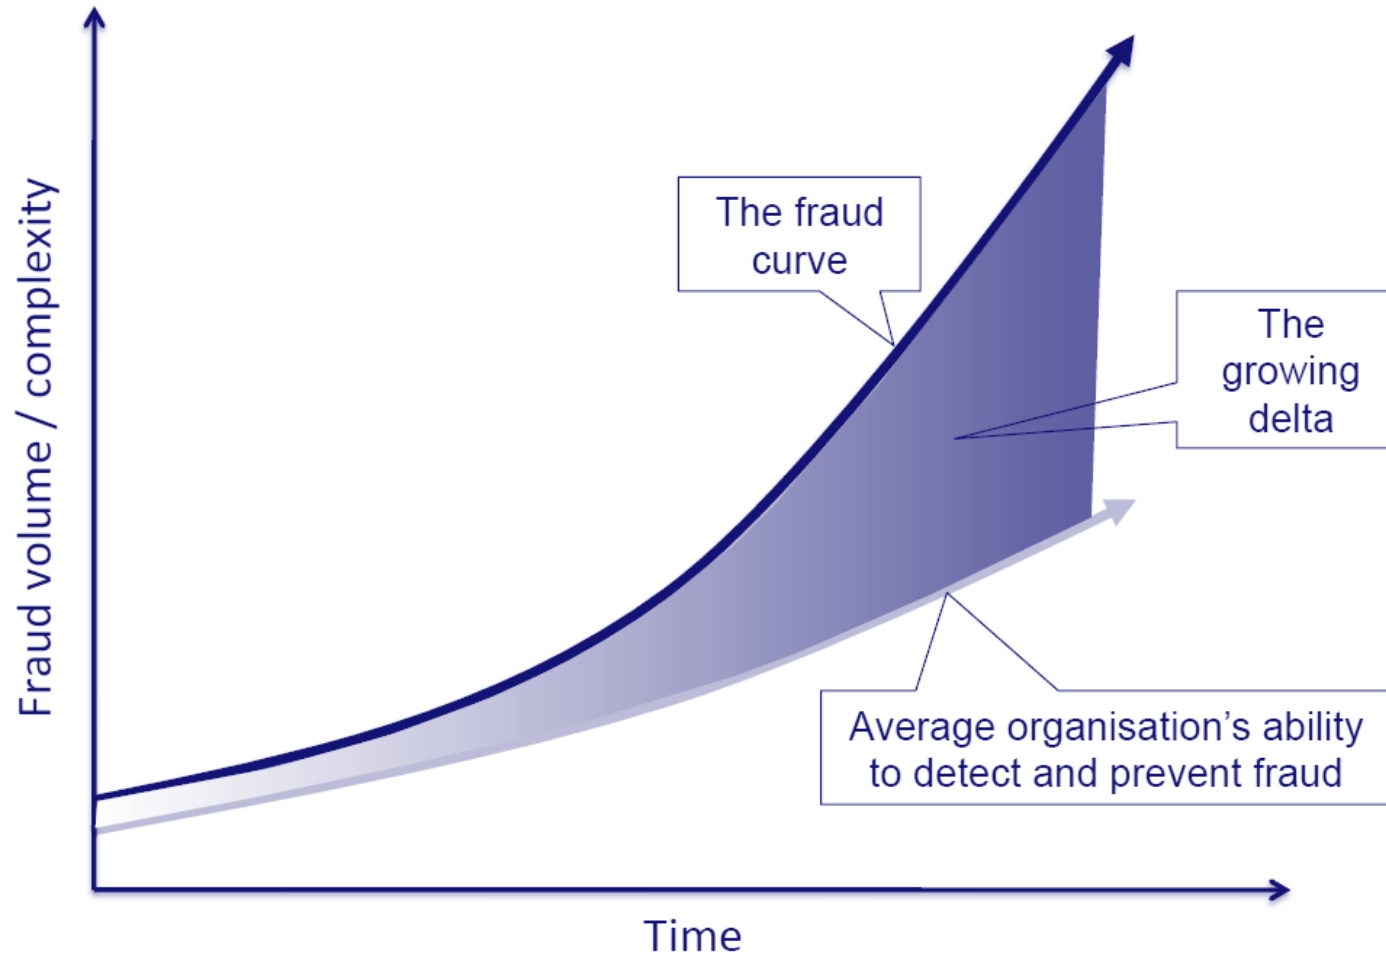

Challenges faced by customs administrations

- Border operations constrained by high trade and travel growth
- Growth of e-commerce demands a great deal of operating skills and digital solutions on the side of border agencies and other stakeholders
- Data quality and comparability of data – data standards
- Monitor data flows across supply chains
- Meet government objectives such as safety, security and revenue collection

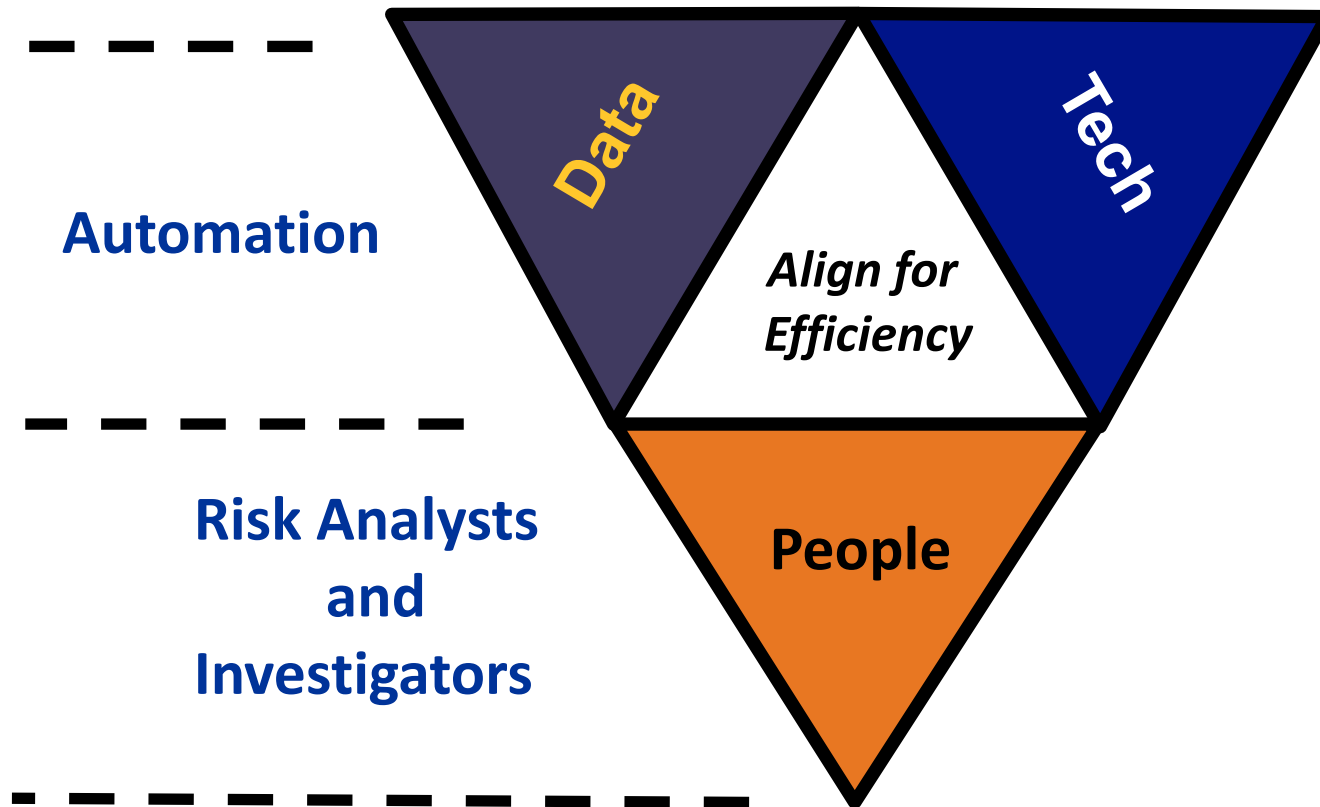

Increased volume and complexity of fraud

The intelligence dilemma

*Efficiently Aligning Resources for
Maximum Risk & Cost Reduction*

How company data can help Customs Agencies

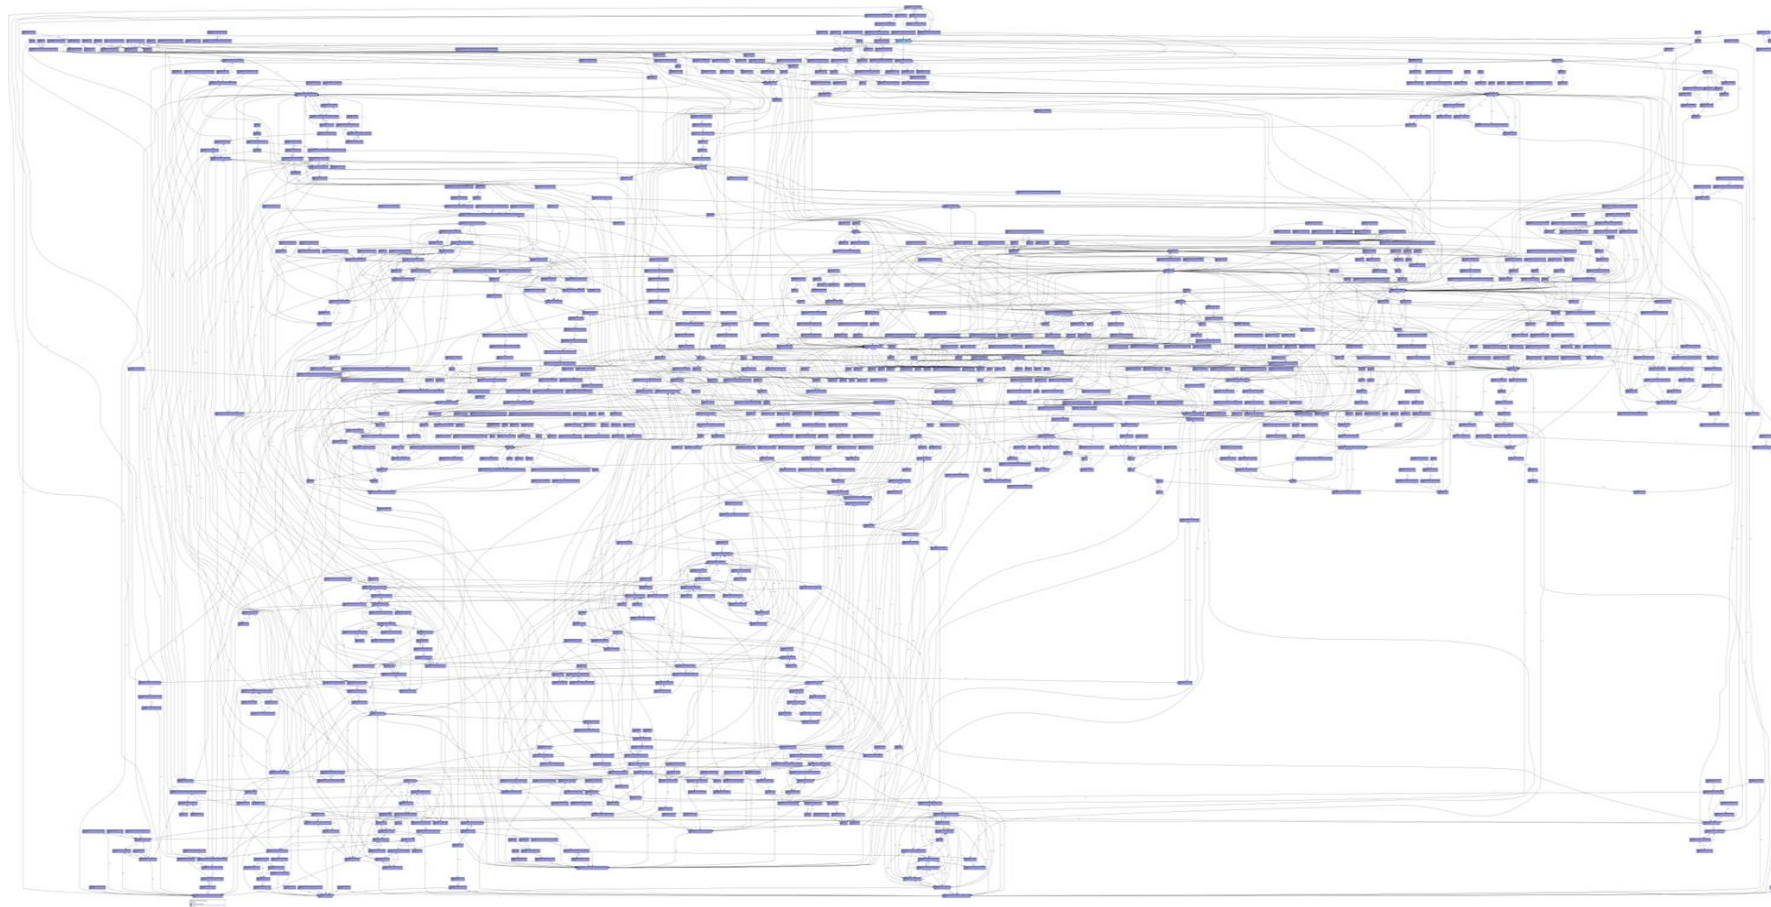

Obtaining accurate private company data is a challenge

- Accuracy and timeliness
- Verification of entity data
- Depth of data:
 - Ownership information – beneficial owners and global ultimate owners
 - Availability of financials and assessing financial strength
- Comparability of data made complex by different reporting standards and variations, languages, local activity codes...

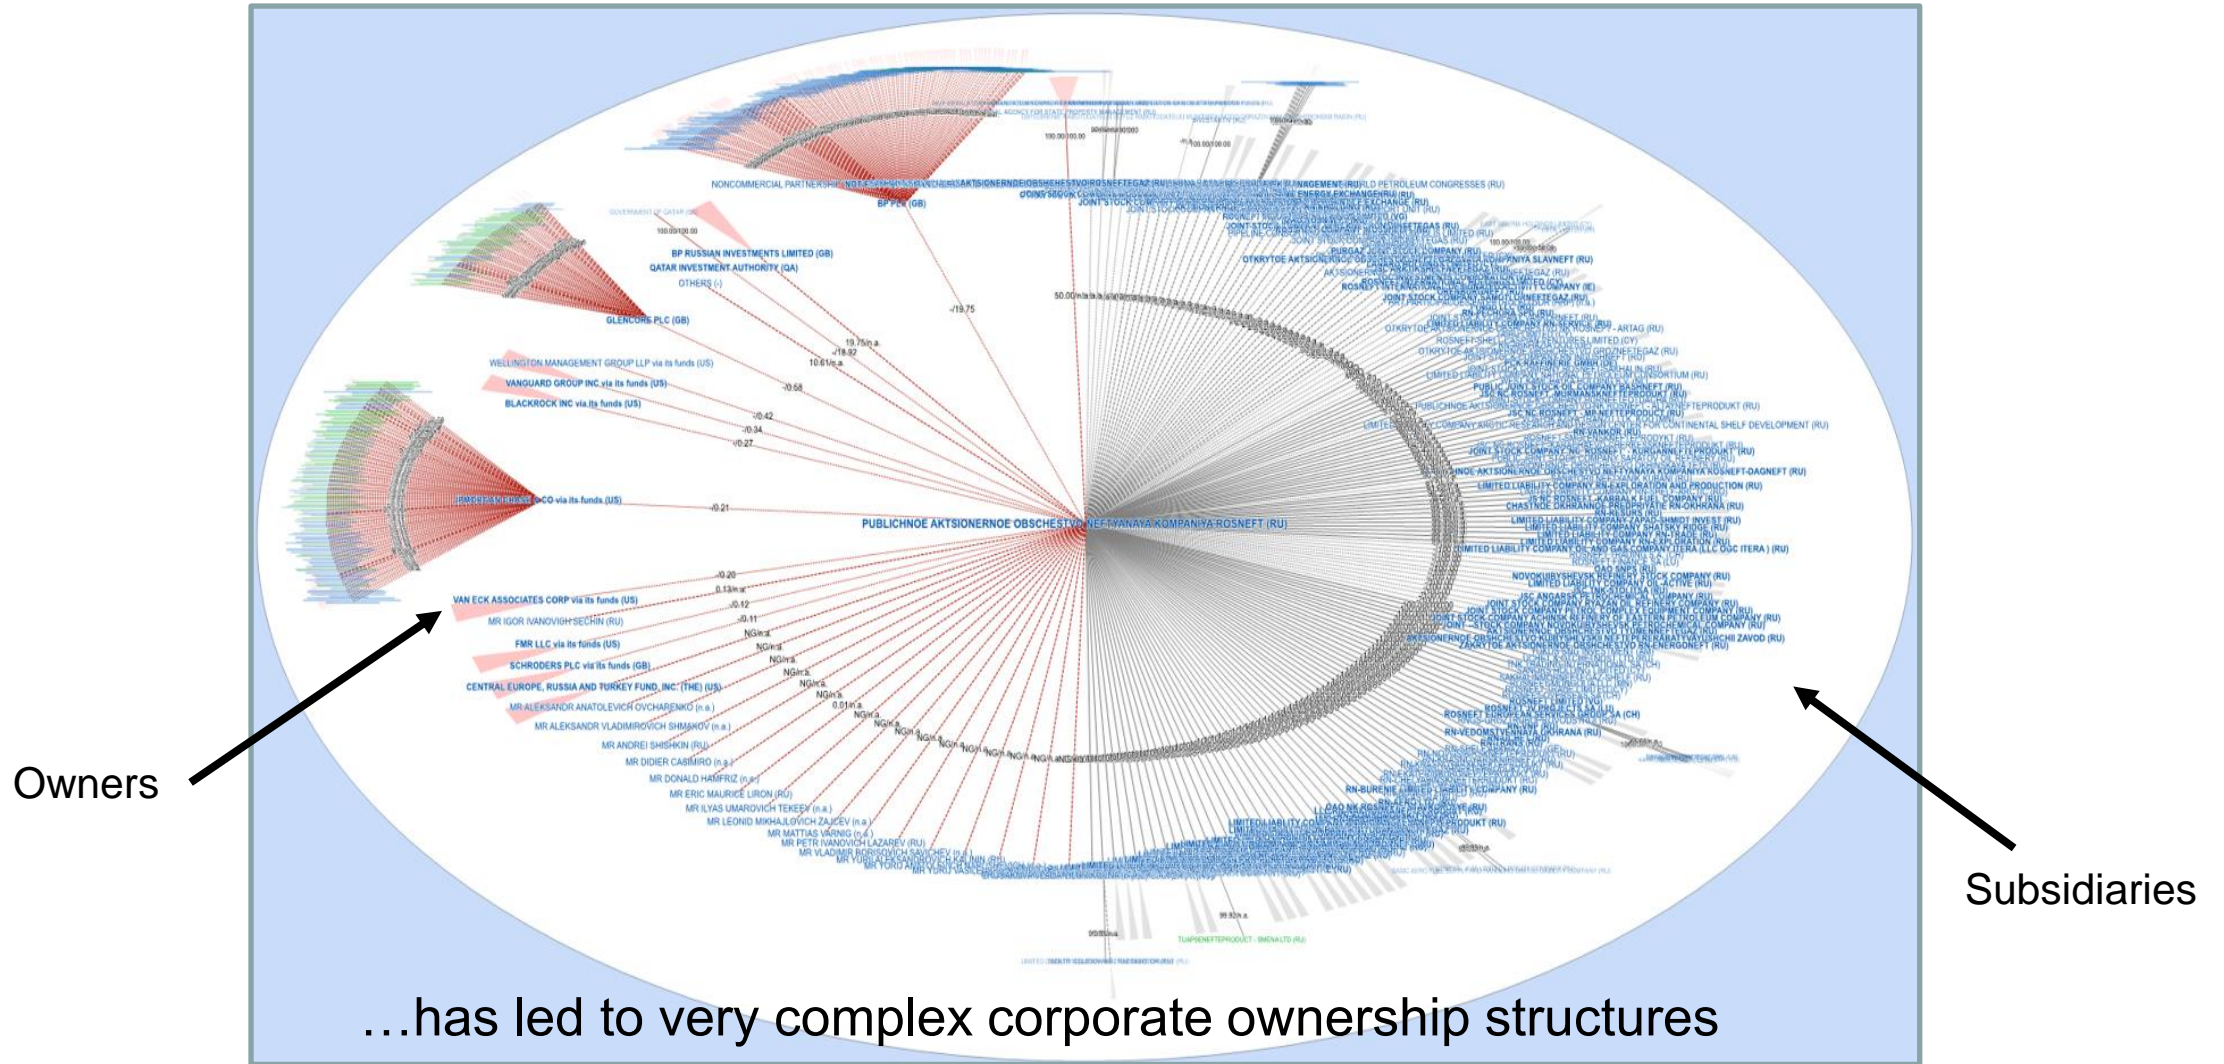

Complex corporate ownership structures keep evolving...

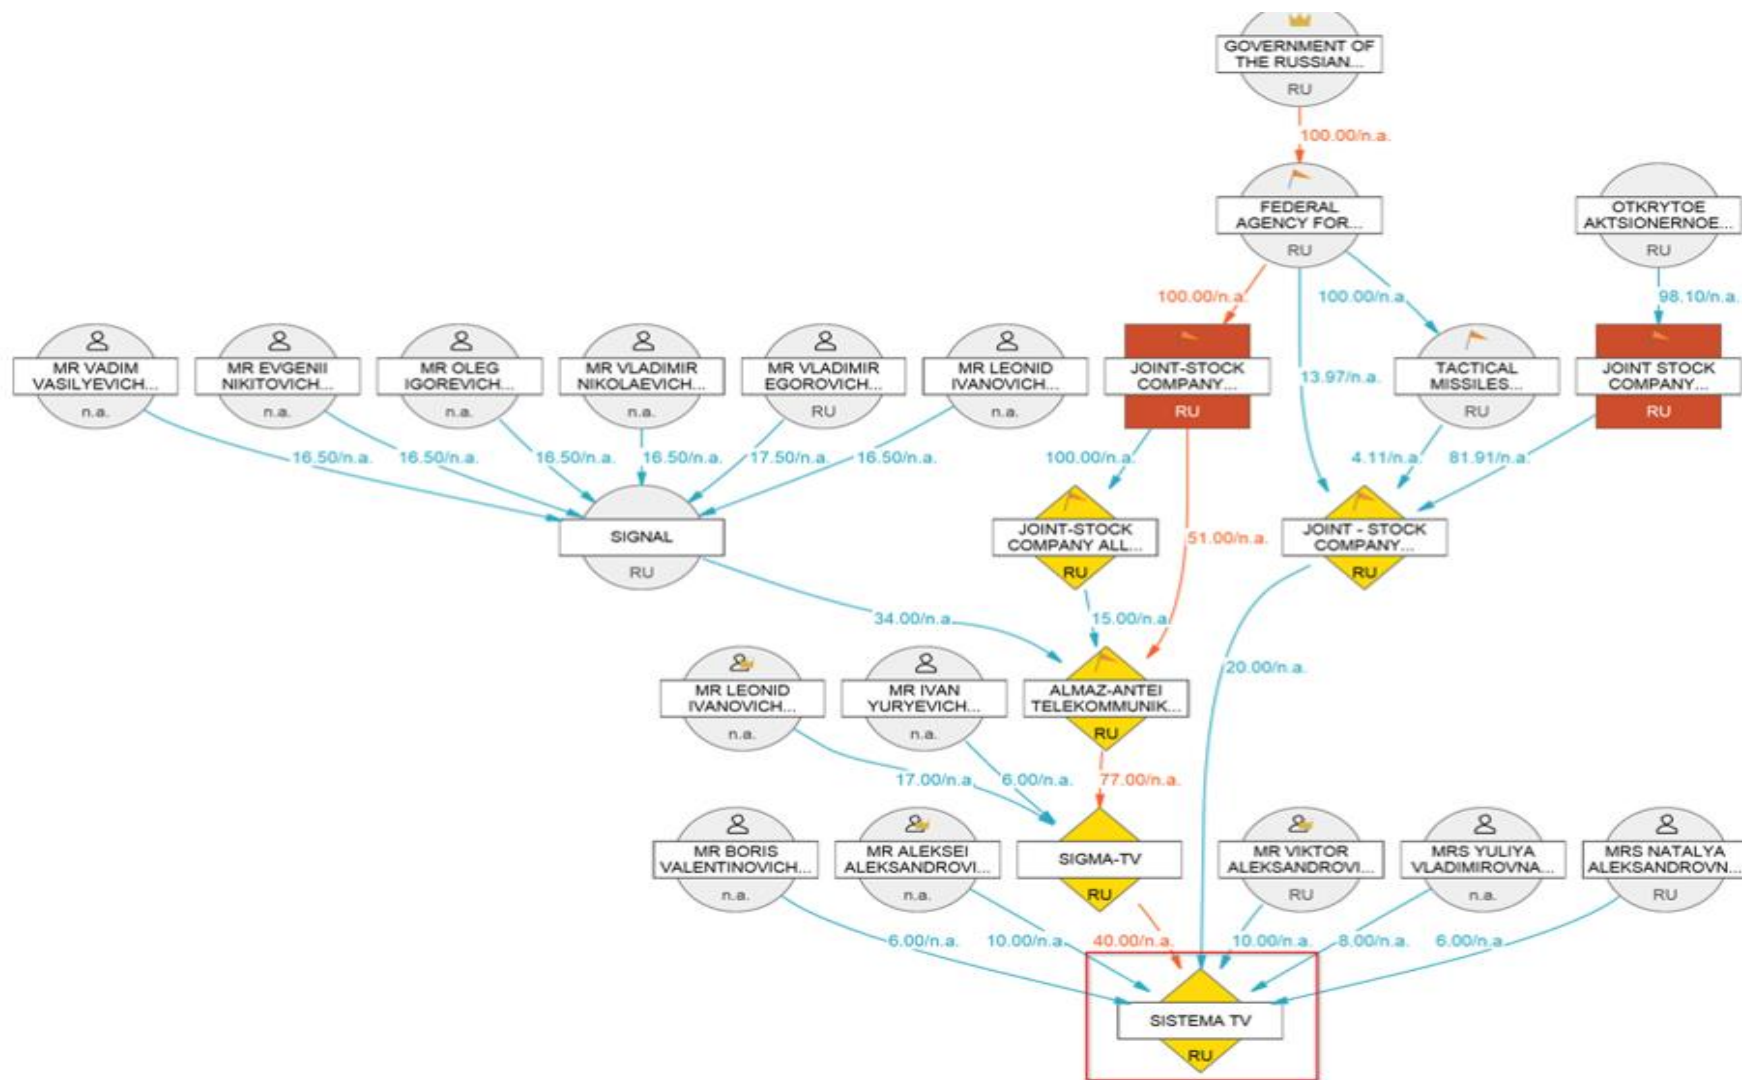

A sample of one level of ownership for one company

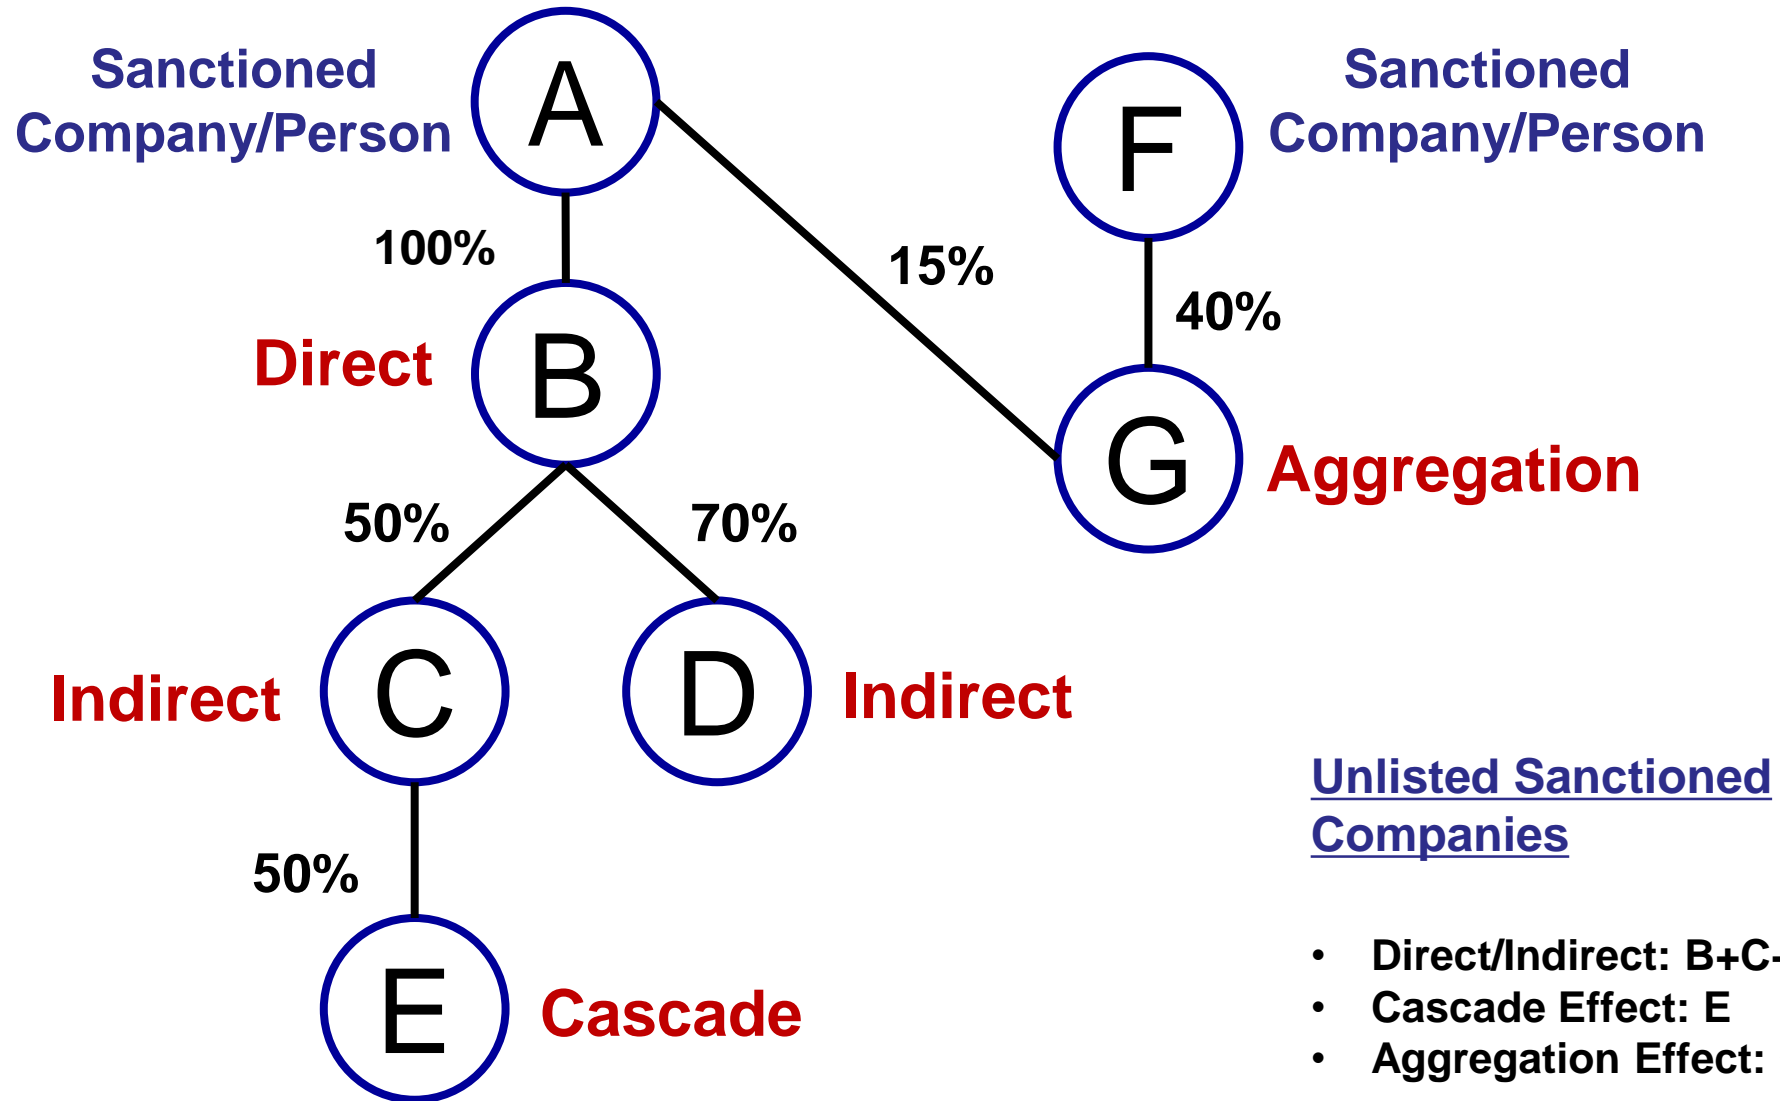

Globalisation

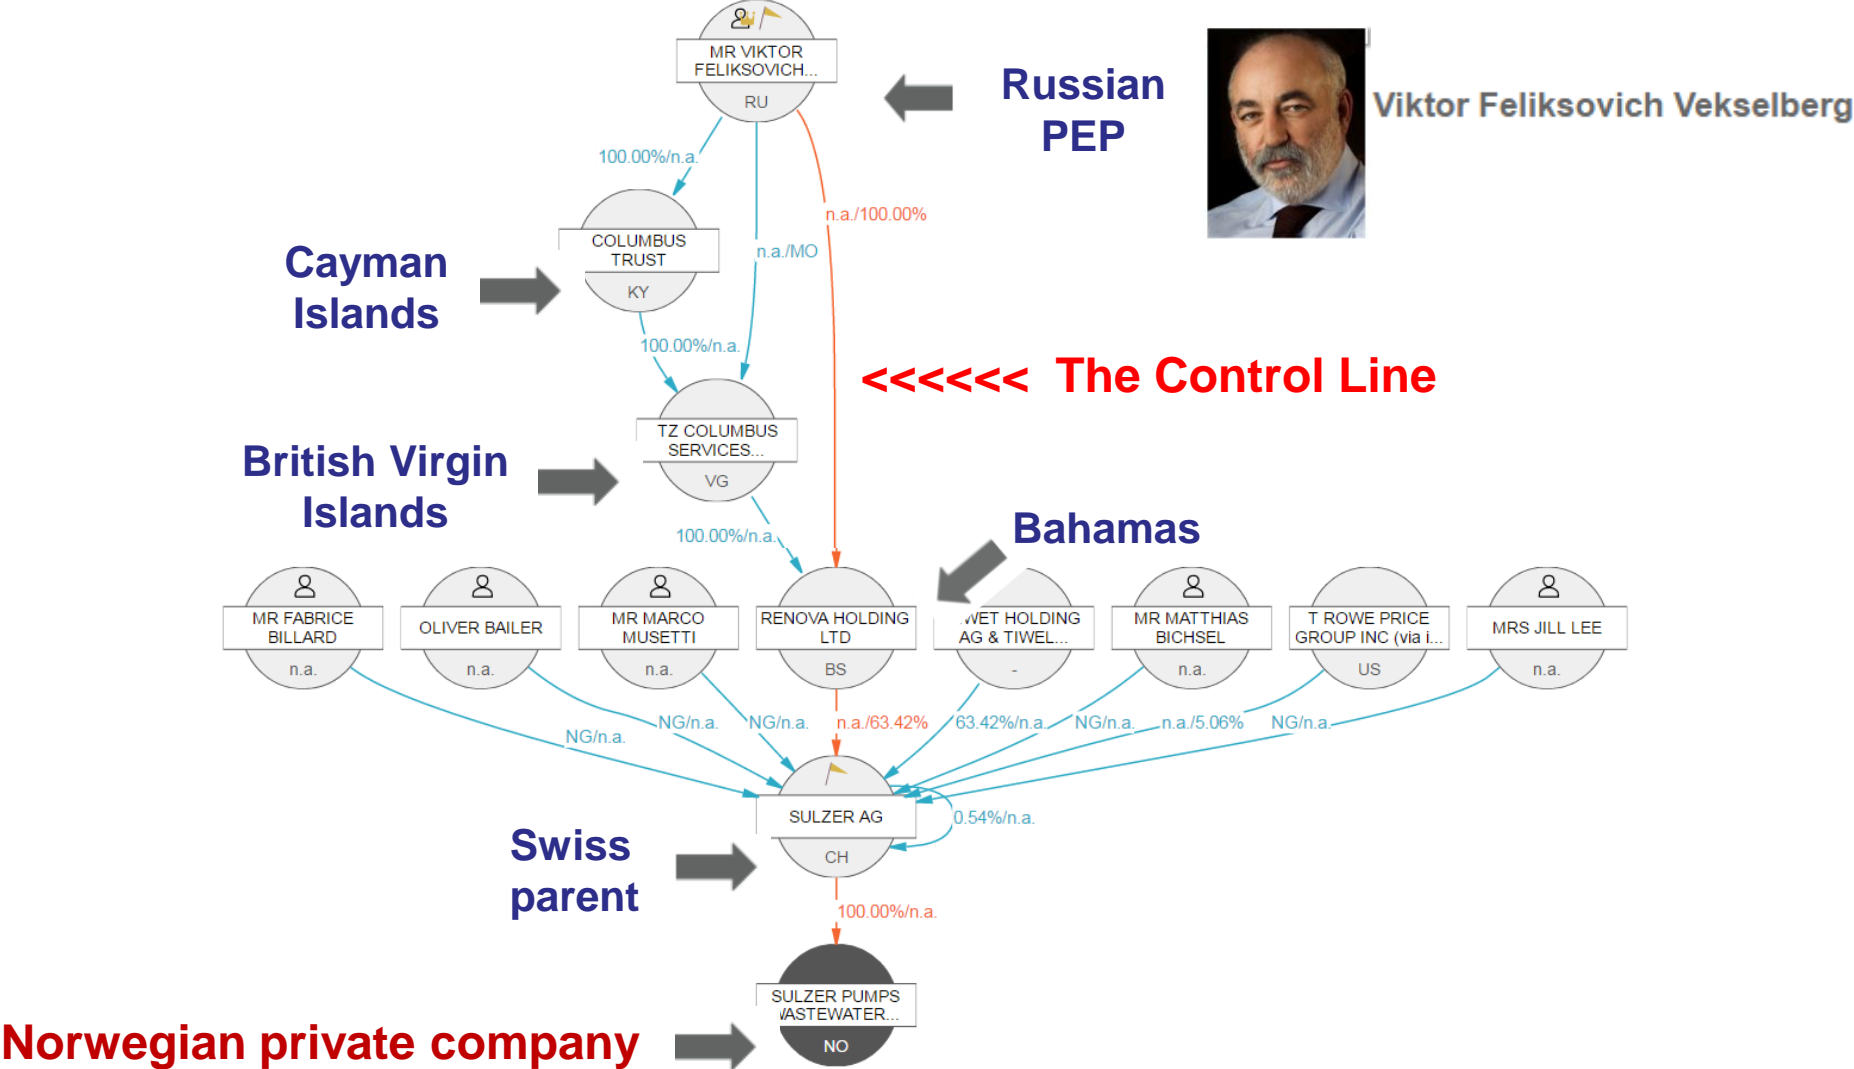

“Sanctioned or Not?”

Example:

Ensuring global security

Change! Ownership is dynamic

Historic ownership links

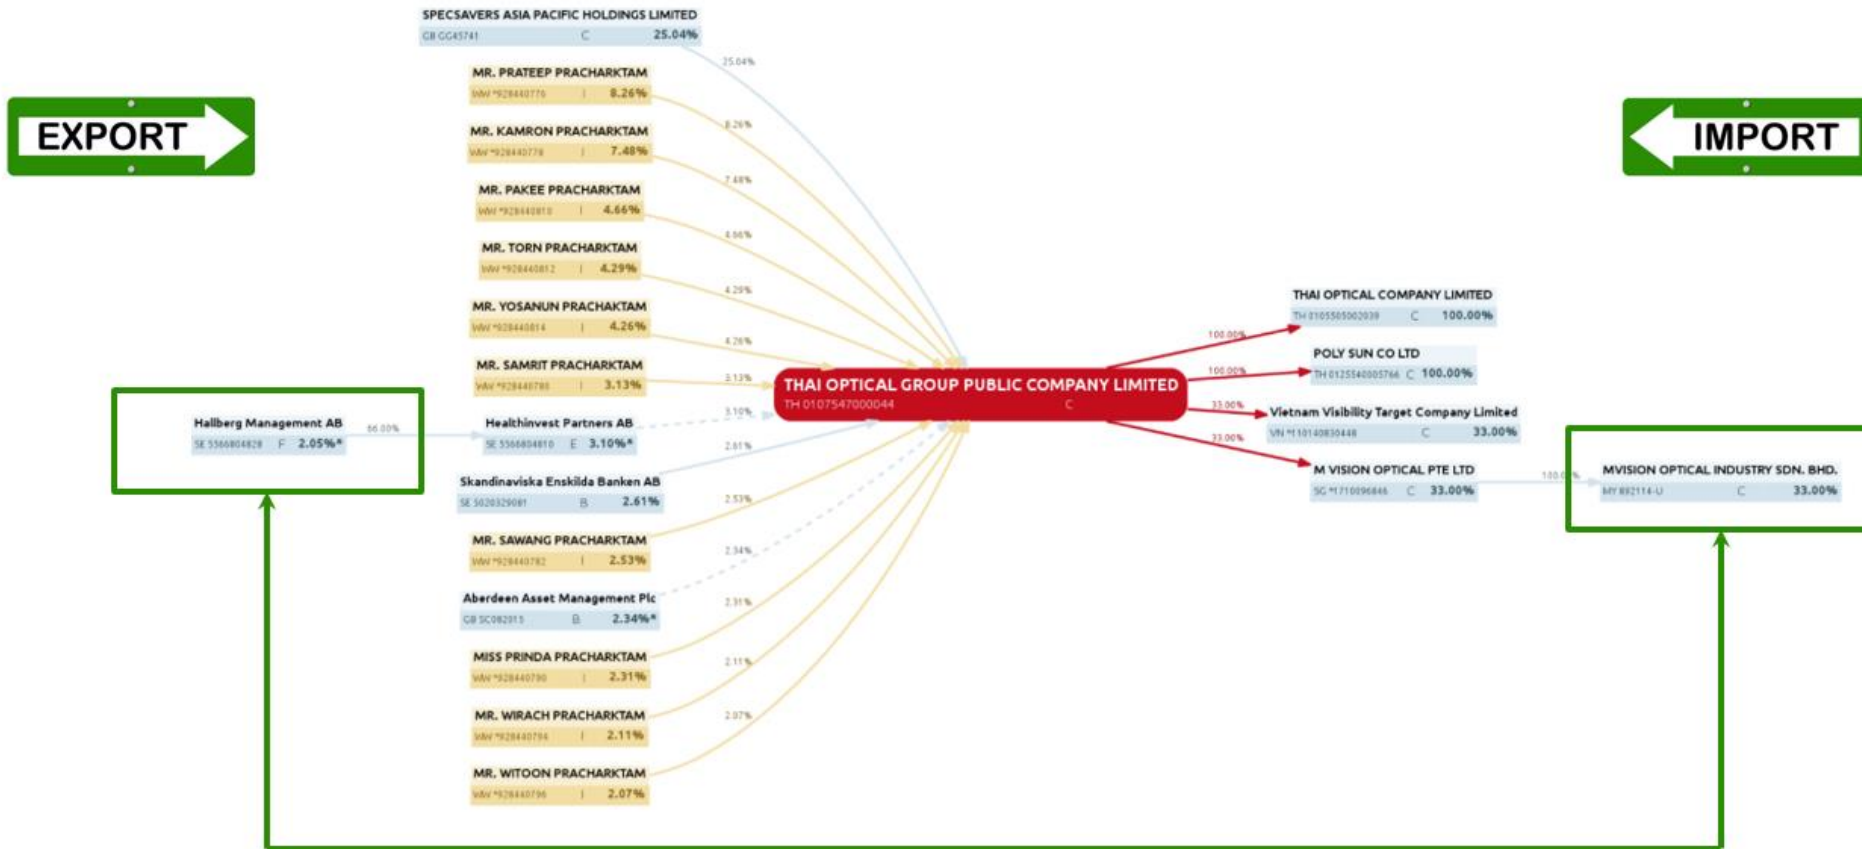

companies that had ownership
changes last month

That's equal to more than 200,000 per day, 8,800 changes per hour or over 2 changes per second!

Fraud and prevention of duty evasion

Identifying company links through ownership

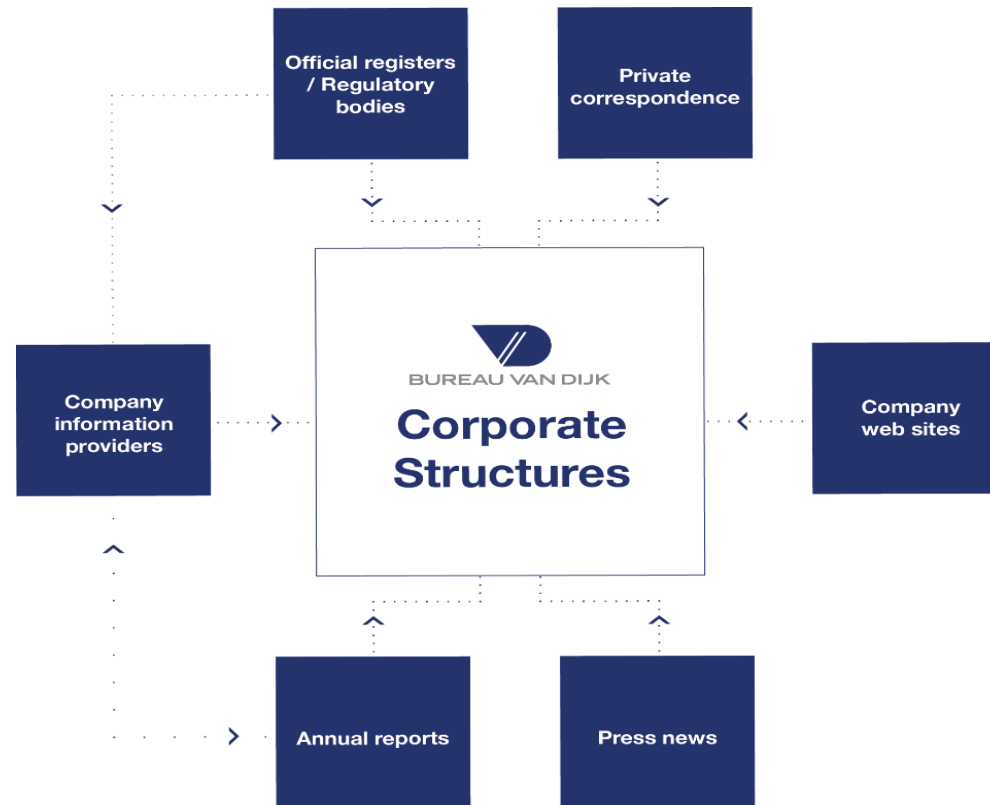

Fraud and prevention of duty evasion

Identifying company links through individuals

Global approach to collecting Beneficial Ownership information

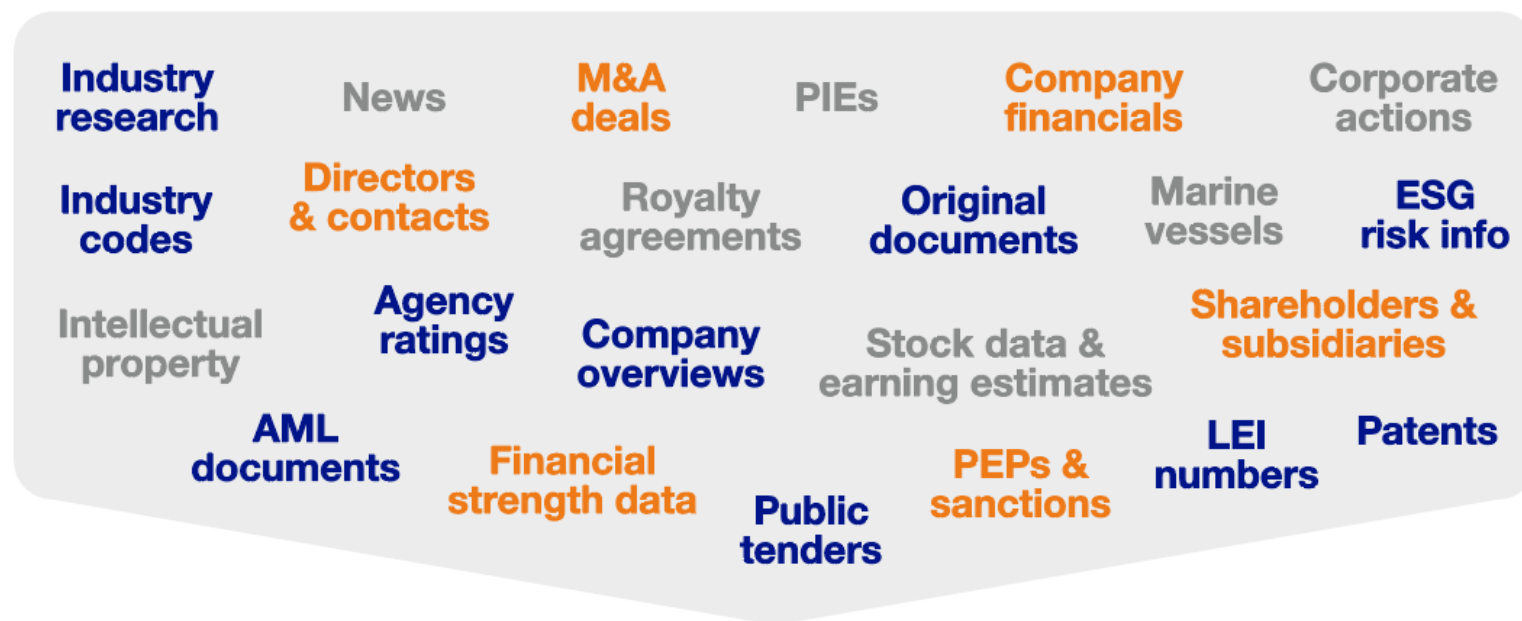

Multiple, global sources and networks are essential

Increasing the depth and breadth of data

Capture

All other aspects of corporations outside of just ownership

Treating data to add value

Addition of user interface and data visualisation tools

Standardising
financials
and ratios

Appending
and linking
corporate
structures

Adding
bespoke
research

Applying data
verification,
cleansing and
quality control

Creating
unique
identifiers

Identifying
beneficial
owners

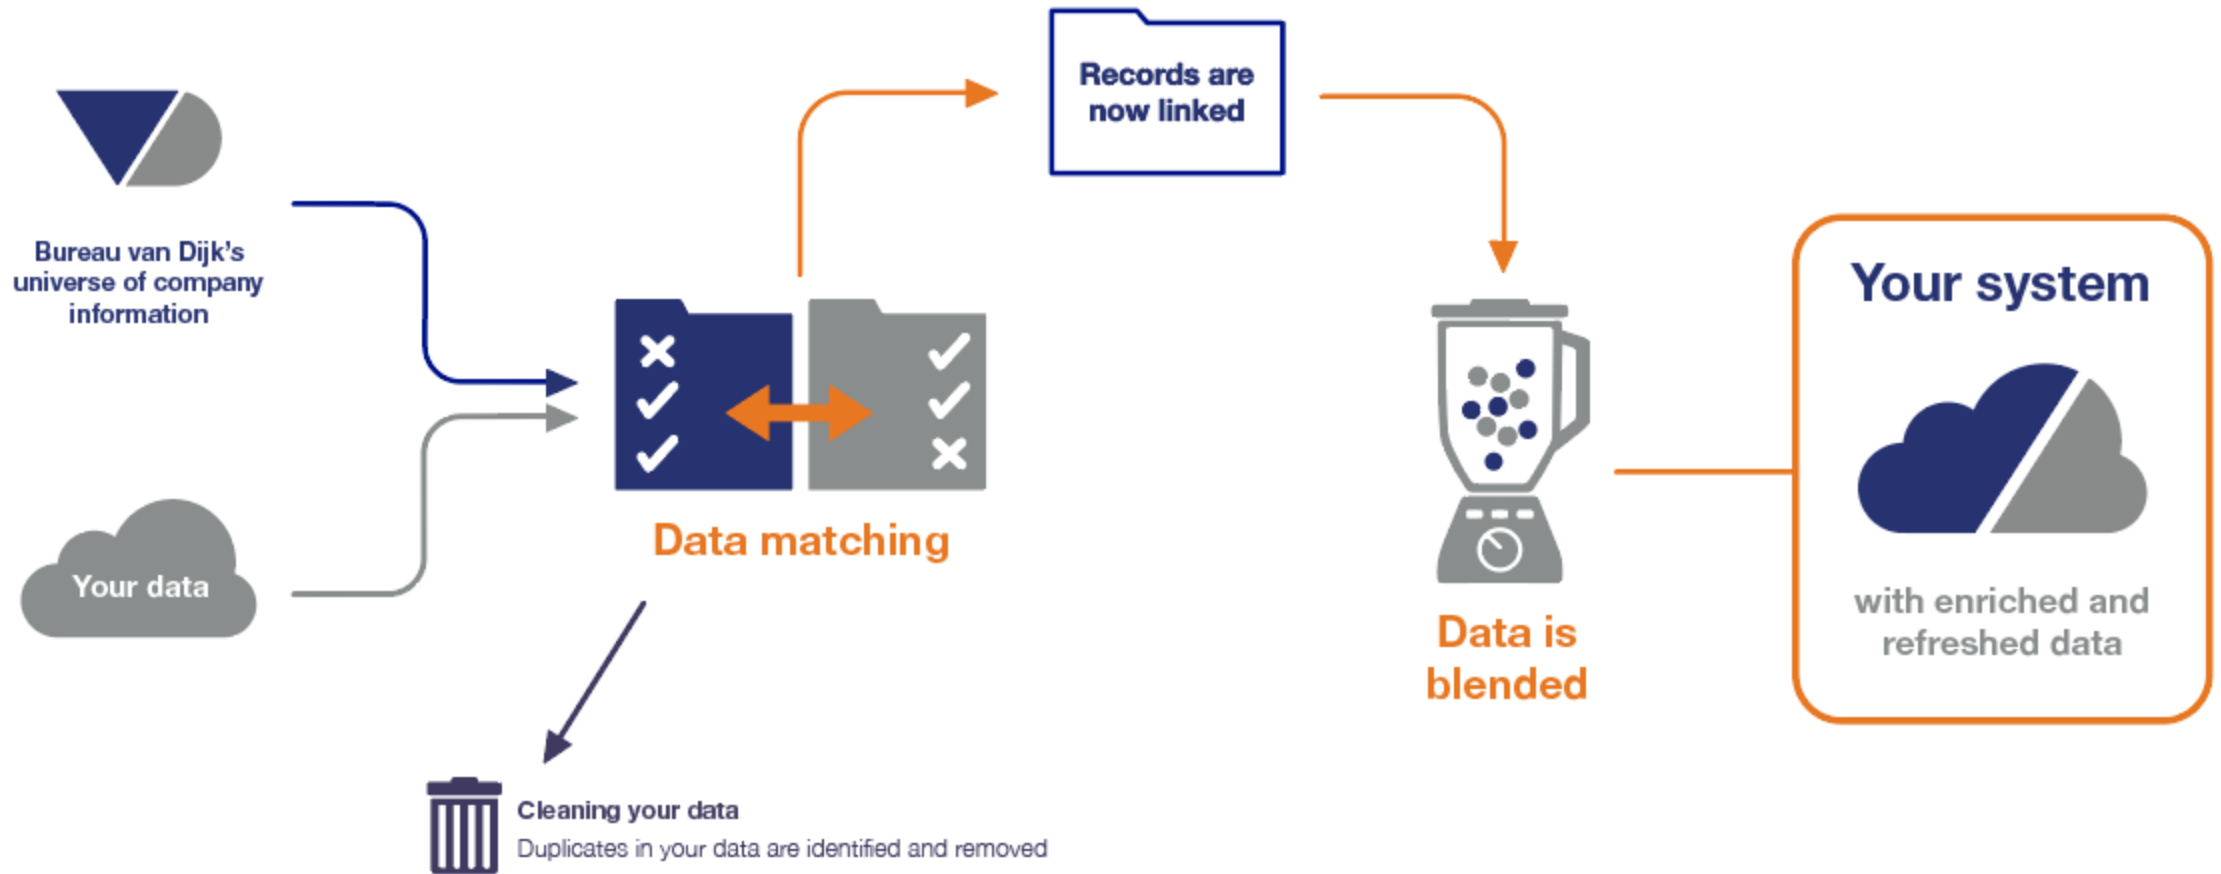

Linking data
sources

Linking
directors and
contacts

Intergrating
M&A deals
and rumours

Blending external data with customs' administrations

Key takeaways

- Accurate private company information helps manage high trade and travel growth
- External sources deliver interpretation of complex corporate structures, identification of beneficial owners and risk checks including PEPs and Sanctions
- Detailed private company information can help determine and validate valuations of import / export prices
- Blending internal knowledge with external company information is the future
